Subject: Phase I Environmental Site Assessment Update
125 North Orange Avenue and
14200 and 14130 Nelson Avenue
City of Industry, California

Dear Mr. Radecki:

In accordance with our contract dated March 3, 2004, Ninyo & Moore has performed a Phase I Environmental Site Assessment Update of the above-referenced property. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site.

We appreciate the opportunity to be of service to you on this project. Should you have any questions, please contact the undersigned at your convenience.

Sincerely,
NINYO & MOORE

Julie Wozencraft

EXECUTIVE SUMMARY

Ninyo & Moore was retained by Richards, Watson & Gershon (RWG), on behalf of their clients, Industry Urban-Development Agency (IUDA), to perform a Phase I Environmental Site Assessment Update (ESAU) for the property located at 125 North Orange Avenue, and 14200 and 14130 Nelson Avenue in the City of Industry, California (site). IUDA is considering purchasing the site. Document review, agency inquiries, and site assessment activities were conducted between March 3, 2004, and April 13, 2004.

In summary, the following items were noted:

- The site has been vacant since the completion of a Phase I Environmental Site Assessment (ESA) and an ESAU completed by ECS – Environmental Services (ECS) in 1999. No new site concerns were revealed by this ESAU.

- Based on the age of the on-site buildings (constructed from the1950s through the late 1960s), and the results of limited asbestos and paint testing completed by ECS, asbestos-containing materials (ACMs) and lead-based paint (LBP) are likely present in each site building.

- Releases of volatile organic compounds (VOCs) to soil and groundwater have occurred at the 125 North Orange parcel. The likely sources of these releases are the former clarifier in the northern portion of the main processing building and a sump just south of the same building. A second clarifier does not appear to be a source of VOCs, but has not yet been removed.

- ECS installed and monitored approximately 22 groundwater monitoring wells at the site and immediate vicinity to evaluate impact to groundwater from on-site releases. ECS was not required by the Regional Water Quality Control Board (RWQCB) or the United States Environmental Protection Agency (USEPA) to conduct any groundwater remediation, however. Campbell Soup Company (Campbell), the current owner of the site, was designated a responsible party (RP) within the Puente Valley operable unit (OU) of the San Gabriel Valley Superfund site. Campbell has since entered into a financial agreement with one of the primary RPs in the group to contribute money to finance overall groundwater remediation within the OU.

- ECS operated a soil vapor extraction (SVE) system during 2002 and 2003 to address VOCs in soil beneath the site. During operation of their SVE system from September 2002 to September 2003, ECS removed approximately 350 pounds of VOCs.

- ECS has completed post-remediation sampling of soil and soil vapor as required by the RWQCB and submitted a requested for closure on November 19, 2003, to the RWQCB. The

RWQCB is currently reviewing the request for closure. Based on our review of available documents, we expect the RWQCB will likely grant closure to Campbell. However, Ninyo & Moore obviously cannot predict the future actions of any regulatory agency. 14130 and 14200 Nelson Avenue have received no further action letters from the RWQCB. Approximately 14 groundwater wells are still present on the 125 North Orange property, all or most of which are currently dry.

- The remediation and testing required by the RWQCB involved limited sampling and analyses in shallow soil. Prior to involvement with the RWQCB, Campbell did conduct limited (eight soil borings) shallow sampling at the site, primarily at the Nelson Street properties. The sampling included analyses for VOCs, metals, and total petroleum hydrocarbon - not all analytes were addressed in each boring. Relatively few samples were analyzed for metals and overall coverage of the site was also limited. Extensive soil sampling was conducted by ECS on the southern half of the North Orange property, but as indicated previously, this sampling was almost exclusively with regard to VOCs in soil 10 feet below ground surface (bgs) or deeper.

Ninyo & Moore has completed a Phase I ESAU for the site. The Phase I ESAU was completed diligently and in accordance with applicable environmental, regulatory and good management standards, as well as in accordance with the scope and limitations of ASTM Practice E 1527-00 and EPA's proposed All Appropriate Inquiry (AAI) standards and that, to the best of our knowledge, the results are complete and accurate. Limitations encountered during this investigation are presented in Section 1.4. Ninyo & Moore has found no evidence or indication of RECs, or conditions indicative of releases or threatened releases of hazardous substances, in connection with the property, with the following exceptions:

- Releases of VOCs from a clarifier and sump have occurred at 125 North Orange. Limited shallow soil sampling has been conducted in these areas.
- Historic pipe-threading operations and oil drum storage occurred at the 14200 Nelson Street Property. Only two soil borings have been completed in these areas.
- No sampling has been conducted near the waste-water collection area at the southwest corner of the site.

Ninyo & Moore recommends the following:

- When a finding of "no further action" is issued by the RWQCB, the on-site groundwater monitoring wells should be abandoned in general accordance with current regulatory guidelines pending approval from the RWQCB.

- Prior to demolition of the on-site buildings, pre-demolition asbestos and LBP surveys should be conducted. ACMs and LBP should be removed by a state-licensed abatement contractor prior to demolition of the building.

- Recent files provided by the Los Angeles County Department of Sanitation (LACDS) should be reviewed upon receipt.

- Clarifier #2 at the 125 North Orange parcel should be removed/abandoned in accordance with applicable local and state requirements.

- Due to the relative lack of analytical data from shallow soil at the 125 North Orange property, we believe additional soil sampling and analysis is necessary to evaluate potential environmental liability. We also recommend additional soil vapor and/or soil sampling be completed at the 14200 Nelson property, particularly in areas of historic pipe-threading and drum storage. We recommend that samples be collected near a former waste-water collection pit at the southwest corner of the 14130 Nelson property, which was noted by ECS.

- We believe it would also be prudent to conduct some area-wide sampling at the site and to analyze those samples for VOCs, metals, and total petroleum hydrocarbon (TPH). (Note that Ninyo & Moore has done the recommended soil and vapor sampling and analysis and a separate Phase II ESA report is being prepared.)

1. INTRODUCTION

RWG, on behalf of their client, IUDA, authorized Ninyo & Moore to perform a Phase I ESAU for the property located at 125 North Orange Avenue, and 14200 and 14130 Nelson Avenue in the City of Industry, California (site; Figure 1). The work was conducted in general accordance with the contract dated March 3, 2004, between RWG and Ninyo & Moore. IUDA is considering purchasing the site. The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with the Phase I ESAU.

1.1. Purpose

In accordance with the ASTM International Standards on Environmental Site Assessments for Commercial Real Estate E 1527-00, the objective of the Phase I ESAU was to identify recognized environmental conditions (RECs), which are defined by ASTM as "the presence or likely presence of any hazardous substance or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property," that were not present at the site at the time of completion of the previous Phase I ESAs by ECS dated April 2, 1999, (125 North Orange Avenue) and February 26, 1999 (14130 and 14200 Nelson Avenue) respectively, and the ESAU completed by ECS for the 125 North Orange Avenue dated August 23, 1999. The work was also conducted in general accordance with EPA's proposed All Appropriate Inquiry (AAI), whose objective is to identify conditions indicative of releases and threatened releases of hazardous substances on, at, in, or to the subject property.

As is discussed in the text of this report, each of the three sections of the site were unoccupied when ESC completed their ESAs and ESAU and have not been occupied by any tenants since that time. Accordingly, the primary focus of this report was to review and evaluate numerous Phase II (subsurface) ESA reports and reports (provided by RWG) of remediation completed by ECS and to draw conclusions regarding the current environmental condition and regulatory status of the site. The review of documents provided by RWG reveals that ESC identified, evaluated, and eventually conducted remedial activities related to subsurface

VOC contamination which appears to have been released from the 125 North Orange Avenue property.

1.2. Involved Parties

Ms. Julie Wozencraft of Ninyo & Moore conducted the site reconnaissance, agency file reviews, interviews, and regulatory inquiries, and Mr. David Shaler and Mr. Len Allen of Ninyo & Moore performed project oversight and quality review.

1.3. Scope of Work

Ninyo & Moore's scope of work for this Phase I ESAU included the following:

- Review readily available reports and documents pertaining to the site, as provided by the client.
- Perform a site reconnaissance to visually identify areas of possibly contaminated surficial soil or surface water, improperly stored hazardous materials, possible sources of polychlorinated biphenyls (PCBs), and possible risks of contamination from activities at the site and adjacent properties, which were not present at the time of ECSs 1999 ESA and ESAU work.
- Review readily available local regulatory agency and building department files for the site for information dated after ECSs 1999 ESA and ESAU work.
- Review available regulatory agency databases for the site and for properties located within a specified radius of the site. The purpose of this review was to evaluate possible environmental impacts to the site. These databases list locations of known hazardous waste sites; landfills; leaking underground storage tanks (LUSTs); permitted facilities that utilize underground storage tanks (USTs); and facilities that use, store, or dispose of hazardous materials.
- Interview personnel familiar with the subject site.
- Prepare this Phase I ESAU report documenting findings and providing opinions and conclusions regarding possible environmental impacts at the site.

1.4. Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by

environmental consultants performing similar work in the project area. No data gaps (as identified in 40 CFR § 312.10) that would affect the ability to identify conditions indicative of releases or threatened releases of hazardous substances were identified, except for the following:

- As part of this Phase I ESAU, requests have been made to the Los Angeles County Department of Sanitation. To-date, this agency has not responded to our request.

With the exception of the limitation stated above, the data obtained during this assessment provided sufficient information to support our professional opinion. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Please note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, it should be noted that this Phase I ESAU does not include analysis of the following: methane gas, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

Our findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, in-

cluding invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5. User Reliance

This report and the information, data, test results, and the conclusions and analyses contained herein regarding the environmental condition of the site and soils and groundwater beneath the site may be relied upon by the IUDA, the City of Industry (the "City") and their successors, and their respective program managers, attorneys, consultants, and appraisers of the site, as well as the designated developer of the site, and may be submitted and relied upon by: (1) the RWQCB; (2) the USEPA; (3) the County of Los Angeles; (4) the City; (5) the California Department of Toxic Substances Control (DTSC); and (6) other state, federal, and local governmental agencies and entities, as part of their evaluation of the risk associated with the development or use of the site and the soils and groundwater beneath the site, and for the purpose of assessing the environmental condition of the site, issuing permits, licenses, and other authorizations to develop the site, and determining whether further environmental review or study is necessary, and that the IUDA, the City, and RWG, and, ultimately, the designated developer of the site can conduct construction and related activities on and develop the site.

2. GENERAL SITE CHARACTERISTICS

The following sections describe the location and the current uses of the site. The uses of adjacent properties are also described.

2.1. Location and Legal Description

The site consists of an approximately 19-acre parcel at the northern corner of North Orange Avenue and Valley Boulevard, in the City of Industry, Los Angeles County, California (Figure 1). The site (Figure 2) consists of three industrial buildings; 125 North Orange (vacant since 1993), 14130 (vacant since 1993), and 14200 Nelson Avenue (vacant since 1998). The

site comprises Assessor's Parcel Numbers (APNs) 8202-033-010 and 8202-033-014. A copy of the assessor's map is provided in Appendix A.

The site is bounded to the northeast by a strip mall and Nelson Avenue; to the southeast by North Orange Avenue; to the southwest by A Union Pacific Railroad right-of-way; and to the northwest by North Long Lane. The site boundary information was obtained during a site reconnaissance by Ninyo & Moore and from a parcel map provided by RWG.

2.2. Current Title Information

A preliminary title report for the site was provided by RWG.. No environmental liens or encumbrances were indicated on the title records.

2.3. Adjacent Properties

In general, the site is located in a commercial, industrial, and retail area (Figure 2). A strip mall and Nelson Avenue is located northeast of the site beyond which are single-family residences and a school athletic field. North Orange Avenue bounds the site to the southeast, followed by a Tropicana (Hansen) processing facility, and commercial buildings. The Union Pacific Railroad's right of way bounds the site to the southwest, followed by Valley Boulevard and retail and commercial buildings. North Long Lane bounds the site to the northwest followed by a lumber yard facility.

2.4. Site Description and Current Site Uses/Operations

The following paragraphs present a description of the structures present at the site, the heating and cooling systems utilized in the site building, the sewage disposal system, and the potable water provider for the site. The Site is now vacant, except for a security guard, so utilities (electricity, water/sewer) are only active in a limited areas of the 125 North Orange Avenue building. There are no tenants at the site.

2.4.1. Site Description

The site is a generally rectangular-shaped parcel that comprises approximately 19-acres. The site includes three vacant industrial buildings that have been vacant since 1993 (125 North Orange, and 14130 Nelson Avenue) and 1998 (14200 Nelson Avenue) (Figure 2). The 125 North Orange building contains a former office, a warehouse and food-processing areas. The Nelson buildings contain a former office and warehouse areas. The center of the Site is a large paved area previously occupied by picking vats. A railroad spur bisects the Site. Color photographs of the site are provided in Appendix B.

2.4.2. Occupants

The site is currently unoccupied. A Vlasic Foods pickling and packaging processing facility was the most recent tenant at 125 North Orange Avenue and 14130 Nelson Avenue. Vlasic vacated the site in 1993. Keenan Supply, an industrial piping and plumbing supply facility, was the last tenant at 14200 Nelson Avenue. Keenan Supply (Keenan) vacated the site in 1998.

2.4.3. Heating and Cooling Systems

Heating and cooling systems are fueled by natural gas and electricity. Natural gas is provided by The Gas Company, and electricity is provided by Southern California Edison Company.

2.4.4. Sewage Disposal/Septic Systems

The site is connected to the City of Industry sewer disposal system.

2.4.5. Potable Water

Potable water is provided to the site by the San Gabriel Water District.

3. SITE RECONNAISSANCE

On March 30, 2004, a representative of Ninyo & Moore conducted a site reconnaissance. The reconnaissance involved a walking tour of the site and visual observations of adjoining properties.

At the time of the site reconnaissance, the weather was overcast. Selected photographs taken during the site reconnaissance are included in Appendix B.

At the time of our site reconnaissance, the site was vacant. According to Mr. Dan Elliott, of ECS, the site has not been occupied since 1998. The site buildings are currently empty, and all processing equipment and a majority of the interior structures have been removed.

3.1. Physical Limitations

Physical limitations were not encountered during the site reconnaissance.

3.2. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of current on-site chemical storage was not observed during our site reconnaissance, except for several one-gallon paint cans, spray paint cans, and paint thinner located in a small room located in the south-central portion of the building at 125 North Orange Avenue. No staining was noted in the room storing these materials.

3.3. Storage and Disposal of Hazardous Wastes

Evidence of current on-site hazardous waste storage was not observed during our site reconnaissance.

3.4. Unidentified Substance Containers

Unidentified substance containers were not observed on site during the site reconnaissance.

3.5. Aboveground and Underground Storage Tanks

Evidence of current on-site ASTs or USTs (i.e., fill pipes, vent pipes, and emergency power generators) was not observed. (As described in Section 5.0, two USTs were removed from the site in 1991.)

3.6. Evidence of Releases

Evidence of recent chemical releases on site (i.e., odors, stressed vegetation, stains, leaks, pools of liquids, and spills) was not observed during the site reconnaissance.

3.7. Polychlorinated Biphenyls (PCBs)

Electrical transformers can be a source of PCBs. Two pad-mounted transformers were observed on the west-central and east-central portions of the site. No staining or other evidence of leaks were noted.

3.8. Suspect Asbestos-Containing Materials (ACMs) and Lead-Based Paint (LBP)

Based on the age of the on-site buildings (approximately 1960 and 1968), suspect ACMs and LBP are likely present.

3.9. Wastewater Systems

A clarifier referred to by ECS as Clarifier #2 was observed outside the northeastern portion of the building at 125 North Orange Avenue. ECS removed what was referred to as Clarifier #1 from the interior of the 125 North Orange Avenue property in 2003. A sump was observed outside the south-central portion of 125 North Orange Avenue. Floor drains were observed throughout the buildings at 125 North Orange and 14130 Nelson Avenue. These were associated with the pickle-processing activities.

3.10. Storm Water Systems

A circular storm drain was observed in the southwestern portion of the site. No staining was noted near the drain.

3.11. Wells

As further discussed in Section 5.0, approximately 14 groundwater monitoring wells installed by ECS were observed at the site. No other wells were observed at the site.

3.12. Other Issues

No other significant environmental issues were noted on-site or in the immediate site vicinity.

4. INTERVIEWS

During the site reconnaissance, Ninyo & Moore interviewed Mr. Dan Elliot, an environmental professional for ECS-Environmental Services that was retained by Campbell Soup Inc. to perform the Phase I ESAs on 125 North Orange Avenue and 14130 and 14200 Nelson Avenue. According to Mr. Elliot, Vlasic Foods vacated the site 125 North Orange Avenue and 14130 Nelson Avenue in 1993. These buildings have not been occupied since Vlasic left. Keenan vacated the 14200 Nelson Avenue property in 1998. The 14200 Nelson Avenue property has not been occupied since Keenan left. Additional information obtained from Mr. Elliot has been incorporated through this report.

5. PREVIOUS REPORTS AND DOCUMENTS

RWG provided Ninyo & Moore with numerous environmental reports completed by ECS and other environmental documents for the subject site. Not all of the documents were specifically relevant to the purpose of this ESAU. The following sections summarize our findings from those documents most relevant to the purpose of this ESAU. Relevant documents reviewed are listed in Section 9, Selected References. Selected figures from the ECS reports were reviewed and are reproduced in Appendix D. The following sections include summaries of the most significant documents reviewed:

Report of Phase I Environmental Site Assessment, 125 North Orange Avenue, City of Industry, California, dated April 2, 1999 by ECS.

In this report, ECS reported that the 125 North Orange property was first developed in the early 1950s. Prior use of the Site/Vicinity is reported as agricultural/residential. The site was used from the early 1950s to early 1960s by Tuttle and Bailey Pacific, Inc. (Tuttle Bailey) to manufacture air control sheet metal components, and from the early 1960s to the late 1970s

by various food-processing facilities. The site was used by Vlasic from 1977 to 1993 as a pickling and food packaging/distribution facility. At the time of the 1998 ESC report, the site was vacant.

Two 12,000-gallon fiberglass USTs containing diesel were removed from the Site (Figure 2) by Conservtech in December 1991. Conservtech submitted a closure report to the Los Angeles County, Department of Public Works (LACDPW) and a closure letter was issued by the LACDPW on March 4, 1992.

The following environmental concerns were noted by ECS in the report:

- The site is contained within the boundaries of the Puente Valley OU of the San Gabriel Valley Superfund Area. ESC concluded that the groundwater beneath the site was had likely been impacted by offsite sources within the OU.
- Based on interviews with former Vlasic employees, ECS suspected that a former boiler room contained a former waste pit that may have been used to dispose of waste oils and cleaning fluids (Figure 2).
- A system of abandoned traps and clarifier #1 (Figure 2) was identified in the main plant used to receive food-processing rinsate. Based on interviews and research conducted by ECS, it was suspected that this portion of the former industrial waste system may have received unregulated wastes prior to system upgrades in the 1970s.
- Staining was observed on the floor of the small metal building used to repair forklifts (Figure 2).
- Based on limited sampling, ACMs were found in floor tile and tile mastic samples analyzed and collected. Limited paint sampling also revealed the presence of LBP at the site.

Report of Phase I Environmental Site Assessment - Update, 125 North Orange Avenue, City of Industry, California, dated August 23, 1999 by ECS.

As described in this report, ECS conducted additional file reviews for the site at the Los Angeles County Department of Public Works, Health Department, Fire Department, and Sanitation District. The primary findings of this review were related to the use of the site in the 1950s by Tuttle Bailey, a manufacturer of air control sheet metal components. The documents reviewed made references to the use of vapor degreasers, spray paint booths, the

storage of paint sludge, and disposal of wastewater in a cesspool. Specific locations were not revealed in the documents. Based on this information, ECS recommended a Phase II ESA be conducted at the property.

Report of Phase I and Phase II Environmental Site Assessment, 14130 and 14200 Nelson Avenue, City of Industry, California, dated February 26, 1999 by ECS.

According to this report, the building at 14200 Nelson Avenue was first developed in 1968 as a warehouse and distribution facility and was occupied from the late 1960s to approximately 1984 by Ebeling & Reuss Company an importer of European china and glassware. From approximately 1986 to 1998, Keenan Supply, an industrial piping and plumbing supply facility, occupied the 14200 building. The building at 14130 Nelson Avenue was constructed in the late 1960s and was used as a warehouse facility and food-processing facilities by several firms, included Vlasic, the last tenant.

At the time of this ESC report, the site (14130 and 14200 Nelson Avenue) was vacant. The following environmental concerns were noted in the ESC report:

- Former pipe-threading machines, the 55-gallon drum storage area, and a scrap metal recycling area at 14200 Nelson Avenue (Figure 2). The machines, drums, and scrap metals had been removed by Keenan, prior to ECS's work at the site.
- The former aboveground food-pickling tank yard (Vlasic) and general truck parking areas at 14130 Nelson Avenue (Figure 2).

Based on these areas of concern, ECS completed three soil borings at 14200 Nelson Avenue, and five at 14130 Nelson Avenue on January 28, 1999 (Figure D-2, Appendix D). ECS did not collect samples at a waste water collection pit at the southwest corner of the 14130 Nelson Avenue building. Based on current observations of this feature, it appears to receive surface runoff from a large portion of the site and is likely connected to the local stormwater drain system. It appears to be the lowest topographic point on the site (Figure 2). Samples collected from single borings at 2.5 and 20 feet bgs in the pipe-threading (B-1) and drum storage areas (B-2) did not contain volatile organic compounds (VOCs) or total petroleum hydrocarbons (TPH). Significant metals concentrations were not detected at 2.5 or

20 feet bgs in B-3 (scrap metal area). Metals were not analyzed in samples from the drum storage area which was used to contain fresh as well as waste oil. Samples from borings B-4 through B-8 did not contain VOCs at 2.5 or in deeper samples (5 or 10 feet depending on the boring). TPH was not detected in samples from borings B-6 through B-8. Significant metals concentrations were not detected in samples collected from B-4 and B-5 (2.5 and 5.0 feet bgs). Based on these findings, ECS did not recommend further assessment for 14130 or 14200 Nelson Avenue.

Report of Phase II Environmental Soil and Groundwater Assessment, 125 North Orange, City of Industry, California, dated January 10, 2000 by ECS.

Based on the recommendations contained in the August 23, 1999 report, soil and groundwater assessment was conducted at the site by ECS between May 1999 and September 1999. The assessment consisted of installing eleven monitoring wells (MW A-1 through MW A-11 – see Figure D-3 – also shows later well installations) across the site; advancing seven interior borings near and south of Clarifier 1 (Figure D-4); advancing five exterior borings north of Clarifier #1 and near the shop area (Figure D-4); conducting a 15 point soil-gas survey in the area of the former boiler room near the suspected former sump (Figure D-5), and shallow trenching at the area of the suspected former sump. The 15 point soil-gas survey also included areas of industrial waste discharge lines near the processing building.

The eleven monitoring wells were installed to a depth of 75 feet and screened from 30 to 75 feet bgs. A total of 59 soil samples collected during well installation were selected for laboratory analysis. The samples were analyzed for VOCs. Samples were analyzed from shallower than 35 feet bgs in only one well, MW-A5, near the center of the site (Appendix D, Figure 3). The 10- and 20-foot bgs samples did not contain detectable VOC concentrations. Samples from shallower than 10 feet bgs were not analyzed shallower that 10 feet bgs in this well. Detectable VOC concentrations in all soil borings from wells ranged from 38 to 301 micrograms per kilogram (µg/kg) for PCE and 5 to 130 µg/kg for TCE. In both cases the maximum concentrations were in MW A-5 @40 feet In general,

the highest concentrations of VOCs were detected in the saturated zone at the soil-groundwater interface. Groundwater was generally encountered at 35 to 45 feet bgs.

Seven soil borings (C-1 through C-7) were drilled inside the former production building to depths of 50 to 65 feet bgs (Figure D-4). Thirty soil samples were selected for laboratory analysis. The shallowest samples collected and analyzed were from 10 feet bgs. PCE was detected in 10-foot samples in C-1, 2, and 6, each near Clarifier #1 PCE was detected from ND to 525 µg/kg (C-3 @ 40 feet) and TCE was detected from ND to 110 µg/kg (same sample). The highest VOCs concentrations detected occurred within the saturated zone at the soil-groundwater interface (40 -45 feet). PCE was detected in all samples analyzed, from 10 to 45 feet bgs, in C-1 and C-6, the two borings closest to Clarifier #1.

Five soil borings (D-1 through D-5) were drilled outside the former production building and the former shop and boiler room to a depth of 50 to 65 feet bgs (Figure D-4). Twenty-six soil samples, collected from varying depth intervals from 10 to 45 feet, were analyzed for VOCs. No samples were collected from depths shallower that 10 feet bgs. PCE was detected in one 10-foot sample, D-1@10' (57 µ/kg); PCE was not detected in the 20 foot samples. Overall, PCE detections ranged from 8 to 413 µg/kg (D-3@45') and TCE detections ranged from 21 to 115 µg/kg (D-1@35'). The highest VOC concentrations occurred just above and within the saturated zone at the soil-groundwater interface (35-45 feet bgs).

ECS also investigated the suspected historical sump location in the former shop area by saw cutting and removing concrete trenching in the area to a depth of 5 feet bgs (Figure D-5). Evidence of the suspected sump was not encountered.

ECS also completed a soil-gas survey surrounding the suspected sump in the former shop and boiler room area. A total of fifteen soil-gas samples were collected from 10 feet bgs; PCE concentrations ranged from 3 to 60 micrograms per liter (µg/l). Based on these analytical results and the lack of evidence of the former sump as revealed by the excavation, ECS concluded that additional evaluation was not warranted.

Groundwater samples collected in each of 11 monitoring wells exceeded the California Maximum Contaminant Levels (MCLs) for PCE, TCE, and 1,2 DCE. PCE and TCE isoconcentration maps contained in the ECS report that the greatest (greater than 1,000 µg/l) of TCE and PCE were within a general "bulls eye" pattern centered around Clarifier #1. Groundwater flow is toward the north. (Appendix D, Plates 1-3) Based on groundwater flow, ECS concluded that the VOCs found in the groundwater beneath the site appeared to have migrated to the site from offsite sources within the OU.

Report of Soil-Gas Survey Assessment, 125 North Orange Avenue, City of Industry, California dated August 15, 2001 by ECS.

ECS submitted a work plan for a soil-gas survey assessment to the RWQCB on July 7, 2000. This plan was approved and the work was conducted in July 2000. Thirty-nine soil-gas probe locations on 100-foot centers were completed across the entire southern half of the 125 North Orange Avenue site (as well as the eastern portion of the 14130 Nelson Avenue parcel). Focused sampling was completed near both clarifiers, the shop area (forklift repair), and former industrial waste (IW) lines (Figure D-6). The probe locations were drilled to a depth of and sampled at 10 feet; those near Clarifiers #1 and #2 were drilled to and sampled at 15 feet bgs (Figure D-6A). VOCs were not detected in samples near Clarifier #1, #2, the shop area, or the probes completed near the IW lines. The site-wide grid sampling revealed an area of elevated PCE concentrations (up to 35 µg/l) near an exterior sump south of the building at 125 North Orange Avenue (Figure D-6). Additional soil-gas samples were collected and analyzed from 20 feet bgs in this area. This sampling showed PCE up to 75 µg/l at 20 feet bgs. ECS also completed two "vertical profile wells VP-1 and VP-2 north of and adjacent to Clarifier #1, respectively (Figure D-6A). Soil-gas results from both wells showed detections of PCE and TCE in soil-gas from 10 to 50 feet bgs (10-foot intervals). The greatest concentrations of PCE were from VP-2 at 10 and 20 feet bgs (470 and 500 µg/l, respectively). Soil samples were collected and analyzed for VOCs from these wells at 10 foot intervals beginning at 20 feet bgs. VOCs were detected in soil in VP-1 at 30, 40, and 50 feet bgs , and in soil from VP-2 at 50 feet bgs (no samples at 40 feet bgs.). ECS con-

cluded that a laterally confined slug of PCE is confined to a soil package of fine-grained and organic-rich materials between 36 and 49 feet bgs; the highest concentration was found near the Clarifier #1.

Groundwater Monitoring Report 1st and 2nd Quarters 2001 and Additional Groundwater Assessment, Former Vlasic Foods Facility, City of Industry, California dated September 14, 2001 by ECS.

Eleven additional groundwater wells were installed at the site in January 2001, primarily on the 14200 and 14130 Nelson properties and the north side of the 125 North Orange property, and the 1st and 2nd quarterly groundwater monitoring was conducted in February 2001 and June 2001 (Figure D-3). During the period from March/April 1999 to June 2001, groundwater elevations in the original 11 groundwater wells dropped an average of approximately 20 feet (from approximately 40 to 60 feet bgs). PCE and TCE isocontour maps in this report, while still showing "bulls eye" patterns in the vicinity of Clarifier #1, reveal a significant decrease in PCE (maximum of 258 µg/l) and TCE (maximum of 79.9 µg/l) concentrations relative to when the wells were installed. These data suggest a correlation between VOC concentrations and groundwater elevations, and that the source of the elevated VOC concentrations in groundwater near the center of the 125 North Orange property is contaminated soil from approximately 30 to 50 feet bgs.

In a letter dated April 29, 2002, the RWQCB, after review the reports completed by ECS, requested the submittal of a remedial action plan for 125 North Orange Avenue to address VOC contamination in the vadose zone. The letter specified Clarifier #1 as the source of VOCs, and also indicated the VOC concentrations in groundwater at the site were likely related to the contact of groundwater with contaminated soil. The letter requested remedial alternatives to remediate VOC hot spots in ground only if "...the groundwater elevation rises again and high concentrations of VOCs return." The letter also requests the quarterly groundwater monitoring continue and that a work plan be prepared to assess the area near the sump on the south side of the building, where elevated VOC concentrations had been detected in soil-gas.

Corrective Action Plan for Soil Remediation, Former Vlasic Foods Facility, City of Industry, California dated May 22, 2002 by ECS.

In response to the April 29, 2002 letter from the RWQCB, the Corrective Action Plan for Soil Remediation (CAP) included operation of a system of soil vapor extraction (SVE) wells in the vicinity of and north of Clarifier #1. SVE wells were to be screened from 10 to 50 or 10 to 60 feet bgs. The stated cleanup criteria were to "Reduce overall VOC concentrations....to constant low levels when compared to...soil gas data.....in 2000", to "Verify that soil gas concentrations have reached an 'asymptotic level' by monitoring rebound.....after periods of VES shutdown.", and to "Verify that a reduction of soil matrix concentrations in ....soils between 30 and 45 feet bgs...after VES has attained constant soil gas levels."

ECS indicated in the CAP that Campbell had been named a Potentially Responsible Party (PRP) in the OU and that Campbell would be contributing (monetarily) to the implementation of regional groundwater cleanup and that groundwater contamination beneath the site would be addressed in that manner.

In a letter dated June 26, 2002, the RWQCB provided conditional approval to the CAP. In the letter the RWQCB requested completion of rebound sampling, soil and soil-vapor confirmation sampling, and issuance of a closure report.

Soil-Gas Survey Assessment 2002, 125 North Orange Avenue, City of Industry, California dated September 5, 2002 by ECS.

ESC, also in response to the April 29 letter from the RWQCB, conducted a soil-gas survey near the exterior sump south of the 125 Orange Building. Twenty-four soil vapor samples were collected and analyzed from each probe at depths of 10, 20, and 30 feet bgs. PCE concentrations in vapor ranged from 11 to 57 µg/l near the sump and from 32 to 120 µg/l inside the building. The maximum concentration of PCE in the samples collected at 10 feet bgs was 39 µg/l (Figure D-7)), just north of the sump, inside the building (SSP-8).

In a letter dated November 7, 2002, the RWQCB commented on ECS's September 5, 2002 Soil-Gas Survey Assessment. In the letter, the RWQCB requested that ECS issue an adden-

dum to the May 22, 2002 CAP to include the area of the sump south of the building at 125 North Orange Avenue, in the proposed SVE remedial activities.

Addendum to the Corrective Action Plan for Soil Remediation, Former Vlasic Foods Facility, City of Industry, California dated December 16, 2002 by ECS.

In this addendum to their CAP, ECS proposed the addition of a vapor extraction well just north of the sump, inside the building. The additional SVE well was proposed to a depth of 55 feet bgs and slotted from 20 to 55 bgs. The CAP addendum was conditionally approved by the RWQCB in a letter dated January 17, 2003.

As documented in SVE System Operation Reports (Section 9.0, References), ECS operated the SVE system, with planned shutdowns for rebound testing, from September 2002, to September 2003. During this period ECS reported the removal of approximately 350 pounds of VOCs from the vadose zone.

Work Plan for Pre-Site Closure Investigation, Former Vlasic Foods Facility, City of Industry, California dated May 31, 2003 by ECS.

According to this work plan, the SVE system had extracted over 29 million standard cubic feet of vapor from the subsurface before the first rebound test and an additional 19.3 million standard cubic feet after the rebound test. The work plan proposed that soil-gas samples from onsite vertical profile wells (VP-1 and VP-2) be collected at 10-foot intervals to 50 feet. Five soil-gas probe locations were to be used to assess the soils around and beneath the sump located south of the 125 North Orange Avenue building (secondary area), probes were to be drilled to 10, 20, and 30 feet. Two soil borings were proposed to confirm the reduction of VOC contamination associated with the primary area of concern (near Clarifier #1) and two borings in the secondary area sump. Borings in the primary area were to be drilled to 45 feet and in the secondary area to 40 feet. Samples were to be analyzed for VOCs. In addition, one soil sample collected from Clarifier #1 was also proposed to be analyzed for "Emergent Chemicals" within the OU such as ammonium perchlorate and 1,3-dioxane.

ECS Letter to RWQCB dated July 17, 2003.

This letter documents a July 9, 2003, meeting between Campbell, ECS and the RWQCB. At this meeting ECS had agreed to complete some additional remedial actions prior to submitting a closure report for the site. These additional tasks included the operation of the VES equipment in the area of Clarifier #1 after the perforations in the SVE wells below 35 feet bgs were abandoned with sand so that vapor extraction is concentrated in the interval from 30 feet bgs to the surface. ECS agreed to the demolition and removal of Clarifier #1 with associated collection and analysis of soil samples beneath the clarifier; completion of a soil-gas survey at two locations in the former pit (Clarifier #1) at depths of 10, 20, and 30 feet bgs; and, after the soil-gas survey, collection of confirmation soil samples beneath the former clarifier pit at 10-foot intervals from 10 to 50 feet bgs. The RWQCB agreed that SVE system operation in the southern portion (sump) of the site have been completed and no further remediation or testing would be required at that portion of the site.

Request for Site Closure, Soil Closure Investigation, Former Vlasic Foods Facility, City of Industry, California dated November 19, 2003 by ECS.

In this document, ECS reported that the SVE system had extracted over 69.8 million cubic feet of vapor from the subsurface during the corrective action at the site, with approximately 350 pounds of VOCs removed. Seventy-two percent of the VOCs (254.8 pounds) were removed during the first six months of operations. ECS stated "Based on the calculations of VOC removal rates, we conclude that the VES extraction had reached an asymptotic level and additional operation would not substantially remove additional VOCs from the subsurface." Clarifier #1 was removed on August 13, 2003, and soil confirmation samples taken were non-detect except one sample at 40 feet bgs which showed a level of 14 mg/kg of PCE.

Post-remediation vapor data from the sump (secondary) area showed only trace (less that 1.5 micrograms per liter) of PCE in two of 17 samples. Four of six soil confirmation samples from this area contained from 1 to 40 µg/kg of PCE and no TCE. Based on the soil matrix and soil-gas results, the soil-vapor extraction operations in the southern portion of the site have significantly reduced the residual PCE concentration beneath the building and

sump area. The target cleanup levels have been achieved, and ECS requested closure from the RWQCB.

Additional Documents Relating to 14130 and 14200 Nelson Avenue

Report of Limited Asbestos and Lead-in-Paint Survey, 14130 and 14200 Nelson Avenue, City of Industry, California dated May 3, 1999 by ECS.

In May 1999, a limited asbestos and lead-in-paint survey was conducted at these two site building. ACMs were found in floor tile and tile mastic samples (only 2 samples were collected). Lead was also detected in the six paint chip samples collected.

In a letter from RWQCB dated February 2003, the RWQCB determined that no further soil assessment or remedial work is required at the 14130 Nelson Avenue site. Documents reviewed indicate that such a letter was also issued by the RWQCB for the 14200 Nelson property at the same time. In a March 18, 2003 letter from ECS to the RWQCB, ECS requested permission to abandon the wells on these sites because they were dry or had less than one-foot of water in the well casings (groundwater levels had dropped to near or deeper than 75 feet bgs.) As such, the wells served no purpose. The letter also confirmed that Campbell had joined the PRP group in 2001. In a July 18, 2003, letter from ECS to the RWQCB, ECS reported that the wells had been abandoned in accordance with an email approval from the RWQCB of May 5, 2003.

6. ENVIRONMENTAL DATABASE SEARCH

A computerized, environmental information database search was performed by EDR on March 18, 2004. The EDR search included federal, state, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted sites of environmental concern, is presented in Appendix E. In addition, a description of the assumptions and approach to the database search is provided in Appendix E. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been reported as having

experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

The database search identified surrounding properties of potential environmental concern on various databases. In addition, twenty-four unmapped properties were identified in the vicinity of the subject site. However, based on the addresses provided for the properties, and/or the types of databases on which the property is listed, there is a low likelihood that the environmental integrity of the site has been adversely affected by these off-site sources.

Based on our review and comparison of the March 18, 2004, EDR database report with the EDR database reports provided in the 1999 Phase I ESA report by ECS, the site was listed on the same regulatory databases HAZNET, FINDS, HIST UST and Los Angeles County with no new information or indications of releases or cleanups contained in the listing. Few changes were noted with respect to facilities within the assigned search radius outlined in the ASTM Standard E 1527-00. These changes are discussed below.

6.1. National Priorities List (NPL): Distance Searched – 1.0 mile

The NPL is the Environmental Protection Agency's (EPA) database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program.

As reported by EDR, "The site is located within the San Gabriel Valley – Area 4, La Puente Operable Unit, National Priority List (NPL) site. Based on information obtained from the EPA, the San Gabriel Valley – Area 4 site is an area of contaminated groundwater that runs along San Jose Creek in La Puente. The plume is approximately five miles long and one mile wide. The groundwater in Area 4 is generally contaminated with VOCs, namely TCE and PCE."

6.2. Corrective Action Report (CORRACTS): Distance Searched – 1.0 mile

The EPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The site was not listed on this database. One facility located within a 1.0-mile radius from the site was listed on this database. Quemetco Inc. is located approximately 0.90-mile southwest and crossgradient from the site. According to EDR, migration of contaminated groundwater from this smelting and alloying facility is "....under control." Based on this and the distance of the facility from the site, this facility would not be considered an environmental concern to the site.

6.3. State Equivalent Priority List, Annual Work Plan Sites (AWP): Distance Searched – 1.0 mile

The Health and Safety Code, as amended by AB129, requires the Cal-EPA, Department of Toxic Substances Control (DTSC) to develop a site-specific expenditure plan the AWP as the basis for an appropriation of California Hazardous Substance Clean-Up Bond Act of 1984 funds. The DTSC is also required to update the report annually and report any significant adjustments to the Legislature on an ongoing basis. The AWP identifies California hazardous waste sites targeted for cleanup by responsible parties, the DTSC, and the EPA over a five-year period.

Neither the site nor properties located within a 1.0-mile radius from the site were listed on this database.

6.4. Toxic Pits Cleanup Facilities: Distance Searched – 1.0 mile

The Toxic Pits database is maintained by the Regional Water Quality Control Board, Division of Loans and Grants.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

6.5. Calsites Database (Calsites): Distance Searched – 0.5 mile

The Calsites database is maintained by the Cal-EPA, DTSC. This database contains information on both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing no further action (NFA) by the DTSC. The remaining properties are in various stages of review and remediation to determine if a problem exists.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

6.6. Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database contains properties which are either proposed or on the NPL and properties which are in the screening and assessment phase for possible inclusion on the NPL.

The site was not listed on this database. Two facilities located more than 0.5-mile from the site were listed on this database. According to EDR, groundwater contamination at both facilities is being addressed as part of the San Gabriel Valley NPL site.

6.7. Resource Conservation and Recovery Act (RCRA) Treatment, Storage and Disposal (TSD) Facilities List: Distance Searched – 0.5 mile

The RCRA TSD database is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

6.8. Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

The EDR database of LUST information system is obtained from the State Water Resources Control Board (SWRCB) and the Regional Water Quality Control Board, Los Angeles Region (RWQCB).

The site was not listed on this database. Ten additional LUST cases not listed in the 1999 EDR located within a 0.5-mile radius from the site were listed. These facilities were located approximately 2,200 to 2,700 feet from the site. Based on the distance, it is unlikely that these facilities will have a significant negative environmental effect on the site.

6.9. Solid Waste Landfill Sites (SWLF): Distance Searched – 0.5 mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) and the SWRCB's Waste Management Unit Database (WMUD).

The site was not listed on this database. The same facility that was listed on the 1999 EDR was listed in the 2004 EDR report with no new information. The EDR listing gives no indication of releases from this facility.

6.10. State Index of Properties with Hazardous Waste – CORTESE List: Distance Searched – 0.5 mile

The CORTESE database is provided by Cal-EPA and is a state index that identifies potential and confirmed hazardous waste sites throughout California.

The site was not listed on this database. The facilities listed on this database were cross-listed with the LUST database discussed in Section 5.4.

6.11. Toxic Release Inventory Database (TRIS): Distance Searched – Site and Adjoining Properties

The Community Right to Know Act (SARA Title III) required the EPA to establish this inventory of toxic chemical emissions from certain facilities.

Neither the site nor adjoining properties were listed on this database.

6.12. Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the SWRCB. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The site was not listed on this database. The adjacent property, listed as Tropicana Products Sales at 14380 Nelson Avenue was listed as having five historical USTs. No other information was provided. The Tropicana site was also listed on the LUST database. According to EDR, solvents were released into the groundwater during tank closure activities. The case received regulatory closure in September 1997. No other adjacent facilities were listed on this database.

6.13. RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites that generate hazardous waste as defined by RCRA. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The site and adjoining properties were not listed on this database.

6.14. Emergency Response Notification System (ERNS) – Site

The ERNS database contains information on reported releases of oil and hazardous substances.

The site was not listed on this database.

6.15. NPL Liens – Site

This list identifies sites that have liens filed against real property by the USEPA in order to recover remediation action expenditures.

The site was not listed on this database.

7. ENVIRONMENTAL RECORDS REVIEW

Ninyo & Moore requested recent (1999 to the present) data for the site from regulatory agencies. A summary of information obtained from the agencies contacted is presented below.

7.1. Building Permits

Ninyo & Moore reviewed building permits for the site at the Los Angeles County Building Department (who has jurisdiction to issue building permits for properties in the City of Industry). Records for the past five years were reviewed. In April of 1999, a permit was issued to Campbell Soup for 14200 Nelson Avenue for the removal of existing roof and the installation of a new roof. In November 2000, a permit was issued for 125 North Orange for the demolition of a conveyor. No other permits were available for the last five years. Copies of the building permits are provided in Appendix C.

7.2. County of Los Angeles Department of Health Services (DOHS)

A request for records regarding hazardous material usage and storage at the site was made to the DOHS. No records were available for 14130 & 14200 Nelson Avenue. Several waste disposal manifests for waste oil from 1989 to 1991 and a Hazardous Materials Business Plan

(1989) were reviewed for 125 North Orange. A hazardous materials inventory list from 1992 listed the following chemicals that were used at the site: calcium hypochlorite, ammonia, acetylene, propane, sodium hydroxide, ethylene glycol, diesel fuel, waste oil, and a sulfuric acid mixture. No violations were noted in the DOHS file from 1999 to 2004.

7.3. Regional Water Quality Control Board, Los Angeles Region (RWQCB)

Ninyo & Moore requested information regarding the site from the RWQCB Spills, Leaks, Investigations and Cleanup (SLIC), LUST, and Well Investigation Program (WIP) divisions. A representative from the LUST RWQCB indicated there were no records pertaining to the site.

Records were reviewed from the WIP and SLIC divisions. Files reviewed consisted of letters from ECS to the RWQCB documenting the abandonment of groundwater monitoring wells located on the Nelson properties and requesting a No Further Action Letter for the Nelson Parcel. These letters were among those provided by RWG.

7.4. Los Angeles County Department of Public Works (LADPW)

Ninyo & Moore requested information from the LADPW regarding USTs and industrial waste discharge usage for the site. No recent records were available for the site.

7.5. South Coast Air Quality Management District (SCAQMD)

A request was submitted to the SCAQMD for information pertaining to the site. The SCAQMD reported no records for the Nelson Avenue properties and no recent records for the North Orange Avenue property. The AIA provided a list of inactive equipment (1992 was the latest) and indicated no active permits-to-operate or notices of violation were on record.

7.6. Department of Toxic Substances Control (DTSC)

A request was submitted to the DTSC for recent information pertaining to the site. No records were available for the site.

7.7. Los Angeles County Department of Sanitation (LACDS)

A request was submitted to the LACDS for recent information pertaining to the site. To date, no response has been received from the LACDS.

8. FINDINGS, OPINIONS, CONCLUSIONS, AND RECOMMENDATIONS

Based upon the results of this Phase I ESA, the following findings, opinions, conclusions and recommendations are provided.

8.1. Findings and Opinions

The following presents a summary of findings and opinions associated with the Phase I ESAU performed for the subject site, including known or suspect RECs, historical RECs, and de minimus environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment).

- The site has been vacant since the completion of Phase I ESAs and the ESAU by ECS in 1999. No new site concerns were revealed by this ESAU.

- Based on the age of the on-site buildings (constructed from the1950s through late 1960's), and the results of limited asbestos and paint testing completed by ECS, ACMs and LBP are likely present in each site building. (Note: Ninyo & Moore has conducted ACM and LBP surveys and has confirmed they are present. Ninyo & Moore is currently preparing an ACM and LBP report.)

- Releases of VOCs to soil and groundwater have occurred at the 125 North Orange parcel. The likely sources of these releases are the former Clarifier #1 (removed in 2003) in the northern portion of the main processing building and a sump just south of the same building. Clarifier #2 does not appear to be a source of VOCs, but has not yet been removed. The sump south of the main processing building has also not been removed.

- ECS installed and monitored approximately 22 groundwater monitoring wells at the site and immediate vicinity to evaluate impact to groundwater from on-site releases. ECS was not required by the RWQCB or the USEPA to conduct any groundwater remediation, however. Campbell was designated a RP within the Puente Valley OU of the San Gabriel Valley Superfund site. Campbell has since entered into a financial agreement with one of the primary RPs in the group to contribute money to finance overall groundwater remediation within the OU.

- ECS operated a SVE system during 2002 and 2003 to address VOCs in soil beneath the site. The system addressed soil in the unsaturated zone (approximately 10 to 30 feet bgs as well as from approximately 30 to 50 feet bgs. This deeper zone was historically saturated, but groundwater levels dropped significantly beginning in the late 1990's. Groundwater levels in the site vicinity are currently deeper that 75 feet bgs. The RWQCB requested that these areas of soil contamination be addressed by Campbell, as contributing sources to groundwater contamination beneath the site. During operation of their SVE system (September 2002 to September 2003), ECS removed approximately 350 pounds of VOCs.

- ECS has completed post-remediation sampling of soil and soil vapor as required by the RWQCB and submitted a requested for closure to the RWQCB on November 19, 2003. The RWQCB is currently reviewing the request for closure. Based on our review of available documents, we believe the RWQCB will likely grant closure to Campbell. However, Ninyo & Moore obviously cannot predict the future actions of any regulatory agency. 14130 and 14200 Nelson Avenue have received no further action letters from the RWQCB. Groundwater wells installed by ECS on these properties have been abandoned. Groundwater wells are still present on the 125 North Orange property, all or most of which are currently dry.

- The remediation and testing required by the RWQCB involved limited sampling and analyses in shallow soil (less that 10 feet bgs). Prior to involvement with the RWQCB, Campbell did conduct limited (eight soil borings) shallow soil sampling at the site, primarily at the Nelson Street properties. The sampling included analyses for VOCs, metals, and TPH - not all analytes were addressed in each boring. Relatively few samples were analyzed for metals, and overall coverage of the site was also limited. Extensive soil sampling was conducted by ECS on the southern half of the North Orange Avenue property, but as indicated previously this sampling was almost exclusively with regard to VOCs in soil 10 feet bgs or deeper.

8.2. Conclusions

Ninyo & Moore has performed a Phase I ESAU for property located at 125 North Orange Avenue, and 14200 and 14130 Nelson Avenue in the City of Industry, California. The Phase I ESAU was completed diligently and in accordance with applicable environmental, regulatory and good management standards, as well as in accordance with the scope and limitations of ASTM Practice E 1527-00 and EPA is proposed AAI standards and the results are complete and accurate to the best of our knowledge. Limitations encountered during this investigation are presented in Section 1.4. Ninyo & Moore has found no evidence or indica-

tion of RECs, or conditions indicative of releases or threatened releases of hazardous substances, in connection with the property, with the following exceptions:

- Releases of VOCs from Clarifier #1 and the sump on the south side of the building at 125 North Orange. Limited shallow soil sampling has been conducted in these areas.
- Historic pipe-threading operations and oil drum storage at the 14200 Nelson Street Property. Only two soil borings have been completed in these areas.
- No sampling has been conducted near the waste-water collection area at the southwest corner of the site.

8.3. Recommendations

- When a finding of "no further action" is issued by the RWQCB, the on-site groundwater monitoring wells should be abandoned in general accordance with current regulatory guidelines.
- ACMs and LBP should be removed by a state-licensed abatement contractor prior to demolition of the building. (Ninyo & Moore is currently preparing an ACM and LBP report.)
- Any recent files provided by the LACDS should be reviewed upon receipt.
- Clarifier #2 and the sump south of the main processing building at the 125 North Orange Avenue Property, should be removed/abandoned in accordance with applicable local and state requirements.
- Due to the relative lack of analytical data from shallow soil at the 125 North Orange Avenue Property, we believe additional soil sampling and analysis is necessary to evaluate potential environmental liability. We also recommend additional soil vapor and/or soil sampling be completed at the 14200 Nelson Avenue Property, particularly in areas of historic pipe-threading and drum storage. We recommend that samples be collected near a former waste-water collection pit at the southwest corner of the 14130 Nelson property, which was noted by ECS. (Note: Ninyo & Moore has completed this work and is currently preparing a Phase II ESA report.)
- We believe it would also be prudent to conduct some area-wide soil sampling at the site and to analyze those samples for VOCs, metals, and TPH.

9. QUALIFICATIONS STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

Mr. David Shaler states that the Phase I ESAU was performed under his direct supervision, and that he has reviewed and approved the report, and the methods and procedures employed in the development of the report confirm to the minimum industry standards. Mr. Shaler certifies that Ninyo & Moore project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Mr. Shaler declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR § 312.10. Mr. Shaler has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. Ninyo & Moore has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

David J. Shaler, R.G., R.E.A.
Senior Project Environmental Geologist

Re: 14130 & 14200 Nelson Avenue, City of Industry, CA 91744

I, the undersigned, being the Custodian or Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, name, or classification; or were not located. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact me at (323) 890-7806.

Very truly yours,

Michael Mina, Deputy Health Officer
Public Health Investigation

COUNTY OF LOS ANGELES
FIRE DEPARTMENT
1320 NORTH EASTERN AVENUE
LOS ANGELES, CALIFORNIA 90063

(213) 720-5129

JOHN W. ENGLUND
FIRE CHIEF
FORESTER & FIRE WARDEN

VLASIC FOODS, INC. 5683
125 N. ORANGE AVENUE
LA PUENTE, CA. 91749-1210

Dear Business Owner:

SUBJECT: HAZARDOUS MATERIALS DISCLOSURE

In 1987, Assembly Bills 2185, 2187, and 3777 were chaptered into law. The primary purpose of these laws is to provide readily available information regarding the location, type and health risks of hazardous materials to emergency response personnel, authorized governmental officials and the public.

The County of Los Angeles Fire Department has been designated as your Administering Agency responsible for implementing this program in your community. Every business is required to comply with the reporting requirements as set forth in Title 2 of the Los Angeles County Code.

The law requires disclosure by all businesses which handle a hazardous material or a mixture containing a hazardous material in a quantity at any one time during the reporting year equal to, or greater than, a total weight of 500 pounds, or a total volume of 55 gallons, or 200 cubic feet at standard temperature and pressure for compressed gas.

A hazardous material may be broadly defined as any material that, because of its quantity, concentration or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety, property or to the environment. A hazardous material includes, but is not limited to, a hazardous substance hazardous waste, and any materials which a handler or the administering agency has a reasonable basis for believing would be injurious to the health and safety of persons or harmful to the environment if released into the work place or the environment.

SI DESEA ESTA CARTA DE EXPLICACION ESCRITA EN ESPANOL, POR FAVOR MANDE SU PEDIDO JUNTO CON SU DIRECCION A LA DIRECCION EN LA PAGINA NUMERO 2.

Businesses handling hazardous materials are required to submit a Business Plan which shall include information on inventories, employee training, and emergency response plans and procedures.

Fire Code requirements are not considered during review of your business plan. Any information you submit to this Administering Agency must not be considered as being in compliance with the Fire Code or any other code, regulation, or ordinance.

Please read the attached requirements and instructions prior to completion of the enclosed Business Plan forms. Your Business Plan is required to be completed and returned to the following address within twenty-one (21) calendar days.

Los Angeles County Fire Department
Prevention and Conservation Bureau
Hazardous Materials Section
5823 Rickenbacker Road
Commerce, CA 90040

If you have any questions or need additional information, please contact the Los Angeles County Fire Department, Hazardous Materials Section, Monday through Friday, 9:00 a.m. - 4:00 p.m. at (213) 720-5129.

Very truly yours,

EARL E. FORDHAM, ACTING FIRE CHIEF

SECTION II: OCCUPANCY DATA

	YES	NO
A. Does your business handle a hazardous material or a mixture containing a hazardous material which has a quantity at any one time during the reporting year equal to, or greater than, a total weight of 500 pounds, or a total volume of 55 gallons or 200 cubic feet at standard temperature and pressure for compressed gas?	[X]	[ ]
B. Does your business handle any quantity of radioactive material?	[ ]	[X]
C. Does your business have an underground tank?	[X]	[ ]
D. If yes, is the tank in service at this time?	[X]	[ ]

E. If your business has a license or permit from any of the following agencies, please indicate the number.

1. Hazardous Materials Underground Storage Permit L.A. County Dept. Public Works # 4263
2. Los Angeles County Health Department Hazardous Waste Control License # _____
3. City of _____ Business License # _____
4. Los Angeles County Business License # L766791-
5. Fire Department Permits: L.P. Gas Storage & Dispensi

_____

_____

_____

If you answered "Yes" to either question A or question B above, you are required to complete Sections III, IV, an (Inventory). You may also be required to complete Secti VI (Site Map). Refer to Site Map Instructions on Page 1

If you answered "No" to both question A and question B above, complete and return pages 1 and 2 only.

SECTION III: EMERGENCY RESPONSE PLANS AND PROCEDURES

A. Your business is required by State Law to provide an immediate verbal report of any release or threatened release of a hazardous material to local fire emergency response personnel, the Local Administering Agency and the Office of Emergency Services. If you have a release or threatened release of hazardous materials, immediately call:

Fire/Paramedics/Police/Sheriff
Phone: 911

Individual Responsible for calling 911 Jay W. Schmidt

After the local emergency response personnel are notified, you shall then notify the Local Administering Agency and the Office of Emergency Services.

Local Administering Agency: (213) 720-5129

State Office of Emergency Services: (800) 852-7550 or (916) 427-4341

Individual Responsible for calling the Local Administering Agency and the State Office of Emergency Services.

Jay W. Schmidt

B. List the local emergency medical facility that will be used by your business in the event of an accident or injury caused by a release or threatened release of hazardous materials.

Hospital/Clinic: Occucare Medical Group

Address: 15707 E. Valley Blvd.

City: Industry Zip Code 91744

Phone: (818) 961-1152

C. Does your business have a private on-site emergency response team?

Yes [X] No [ ]

If yes, describe what policies and procedures your business will follow to notify your on-site emergency response team in the event of a release or threatened release of hazardous materials. Paging system, Telephones.

State Law requires your business to complete all sections of this Emergency Response Procedure listed below. "N/A" is not acceptable.

D. Briefly describe your business' standard operating procedures in the event of a release or threatened release of hazardous materials:

1. Prevention - Describe what policies and procedures your business will follow to prevent a release or threatened release of hazardous materials. Only qualified, trained employees can handle, operate, repair storage facilities, transport or use hazardous materials. Plant safety audits are conducted monthly. Quarterly safety audits are conducted by our Corporate offices.

2. Mitigation - Describe what policies and procedures your business will follow to reduce the hazard to persons, property or the environment caused by a release or threatened release of hazardous materials. Evacuation and notification procedures are in place. When the plant is operating qualified Supervisors/Managers are on duty. 24 hour guar Service is in place and extensive security proced are in effect 24 hours per day, 7 days per wee to prevent vandalism, unauthorized persons in the area, and prompt notification of managemen

3. Abatement - Describe what policies and procedures your business will follow to remove the hazard to persons, property or the environment caused by a release or threatened release of hazardous materials. The Company employs effective notification procedu Key employees are trained in containment and neutralization procedures, if feasible for the material and situation.

SITE MAP INSTRUCTIONS

1. Review these instructions and the example site map prior to completing your business' site map. Site maps not conforming to these requirements shall be returned for correction.

2. Business site maps are required to be completed by each business that handles a hazardous material which has a quantity at any one time during the reporting year greater than a total weight of 5,000 lbs. or a total volume of 500 gallons or 2,000 cubic feet at standard temperature and pressure for compressed gas. For large businesses, complete additional site maps, if necessary.

3. Business site maps shall be drawn on the 8 1/2" x 11" site map form that is provided. Copies must be exact facsimiles, both front and back side. No pencil drawings, blue prints or other facsimiles shall be accepted.

4. The following symbols shall be used:

- Fire Department Sprinkler Connection
- Fire Department Standpipe Connection
- Fire Hydrants
- E/S — Evacuation/Staging Areas
- MS DS — MSDS Storage Location
- LAS — Limited Access Systems (e.g. Knox Box)
- G — Guard Station
- AC — Air Conditioning Controls
- E — Electrical Panel
- G — Gas Shut-off
- W — Water Shut-off
- Fence/Barrier
- Railroad Track
- Storm Drain
- S — Sewer
- Aboveground Tank
- Underground Tank
- IT — Insulated Tank
- PT — Pressurized Tank

5. Identify the storage areas and type of hazardous materials stored in these areas using the following symbols:

HMS - Hazardous Materials Storage/Handling Area

COM - Combustible
COR - Corrosive
CRY - Cryogenic
ETI - Etiologic
EXP - Explosive
FLA - Flammable
ORG - Organic Peroxide
OXI - Oxidixer
PSN - Poison
PYR - Pyrophoric
RAD - Radioactive
TOX - Toxic
WRE - Water Reactive
WST - Waste

March 30, 1989

vlasic

Mr. Nosa Omoruyi
LOS ANGELES COUNTY - DEPARTMENT OF HEALTH SERVICES
2615 S. Grand Ave., 6th floor No. 601
Los Angeles, CA 90007

Dear Mr. Omoruyi,

NOTICE OF VIOLATION AND ORDER TO COMPLY

In response to your report of observations on March 20, 1989, we have initiated the following action:

STORAGE:

3. All hazardous waste accumulation was removed on March 21, 1989 (manifest enclosed). We have requested "HAZARDOUS WASTE" labels from our waste transporters to assure proper identification of future wastes.

MANAGEMENT:

4. Our contingency and training program is being reviewed for assurance of its applicability. This policy will be forwarded to you prior to April 20, 1989.

TRANSPORTATION:

6. Refer to #10 below.
7. Instructions to responsible parties will assure this regulation is complied with.

DISPOSAL:

10. The observed 55 gallon drums have been identified, labeled, and properly stored. The two black drums contain Hyamine (quanternary ammonium) used as a germicide and the blue drum contains caustic soda used for PH control. Both solutions are currently used in the tanking operation and will be eliminated through use in this operation rather than being disposed of as waste.

If you have any questions regarding our action in these matters, please contact me at my office (818) 330-7461.

Very truly yours,

Robert Warner

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

EXECUTIVE SUMMARY

EDR PROPRIETARY HISTORICAL DATABASES

See the EDR Proprietary Historical Database Section for details

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/29/2004 has revealed that there is 1 NPL site within approximately 1.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
SAN GABRIEL VALLEY (AREA 2)	***SUNSET & SAN BERNARDINO***	***1/2 - 1 NE***	***0***	***8***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).
CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 11/17/2003 has revealed that there are 2 CERCLIS sites within approximately 0.75 miles of the target property.

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/18/2003 has revealed that there is 1 CORRACTS site within approximately 1.25 miles of the target property.

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-LQG list, as provided by EDR, and dated 01/12/2004 has revealed that there are 3 RCRIS-LQG sites within approximately 0.5 miles of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 18 Cortese sites within approximately 0.75 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 68 HAZNET sites within approximately 0.5 miles of the target property.

Site Description: Four areas of groundwater contamination are listed on the National Priorities List: San Gabriel Valley Area 1, San Gabriel Valley Area 2, San Gabriel Valley 3, and San Gabriel Valley 4. The four areas represent a significant portion of the 170 squ are mile San Gabriel Valley in Los Angeles County, California. More than one million residents live in the San Gabriel Valley alongside a variety of commercial and industrial operations. The San Gabriel Aquifer, which underlies most of the San Gab riel Valley Basin, stores an estimated three trillion gallons of water and is the primary source of water for most of the Basin?s residents. Major surface water features in the San Gabriel Valley include the San Gabriel River, tributaries to the San Gabriel River system, and spreading basins located in or adjacent to the river channels. The approximate location of the San Gabriel Valley Area 2 Site is west of highway 39, south of the San Gabriel Mountains, east of the San Gabriel River, and no rth of Walnut Creek. Nearly all of the Baldwin Park area is fully developed for

SAN GABRIEL VALLEY (AREA 2) (Continued) **1000114961**

residential, commercial, and industrial use. The largest parcels of open land are active and inactive gravel pits and the Santa Fe flood Control Basin. Water purveyors in the site area include: the City of Azusa, California Domestic Water Company, City of Glendora, La Puente Valley County Water District, San Gabriel Valley Water Company, Suburban Water Systems, and Valley County Water District. Volatile Organic Compounds (VOCs), major contaminants of concern at the San Gabriel Valley Sites, were used in large quantities at industrial facilities as early as the 1940?s. From the 1940?s through the 1980?s, carbon tetrachloride, tetrachloroet hane, thrichlorethene, and other chlorinated solvents were used by hundreds of businesses for degreasing, as raw materials for automotive products, by a solvent recycler, for chemical extractions , and for other purposes. VOCs have been released by a combination of intentional disposal, careless handling during loading and unloading, leaking tanks and pipes, and other means. VOCs were not detected in ground water until 1979 during environmental monitoring activities conducted by Aerojet Electro systems near its facility in Azusa. In May 1984, EPA listed four areas of contamination were listed as San Gabriel Valley Area 1 through 4. EPA began its enforcement efforts in the site area in 1985 with searches for and evaluations of historical F ederal, State, and local records on chemical usage, handling, and disposal. In 1985, the California Regional Water Quality Board began its Well Investigation Program (WIP) to identify the sources of ground water contamination detected in water suppl y wells. In 1989, EPA entered into a cooperative agreement to expand the WIP program to determine the nature and extent of contamination in the San Gabriel Valley. The RI/FS for the Baldwin Park OU was conducted concurrently with source identific ation efforts, as a fund-lead project. In March 1994, the Record of Decision (ROD) document was signed.

NPL:
EPA ID: CAD980818512
Region: 09
Federal: General
Final Date: 05/08/1984

NPL SUMMARY:
Summary : Conditions at listing September 1983): San Gabriel Valley Area 2) is a ground water plume that parallels the San Gabriel River to the west in the San Gabriel ground water basin in the Baldwin Park area of Los Angeles County, California. The plum
e is about 7.5 miles long and 1.5 miles wide.Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride, according to analyses by State agencies and local water companies. Many public wells in the a
rea exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per
billion ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service.Status June 1984): A supplemental sampling program of contaminat
ed wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of co
ntamination and to develop alternatives for treatment and management of the problem.EPA continues its investigation to identify sources of the contamination.This site, along with the three other San Gabriel Valley sites, was added to the NPL in May
1984 because it involves a serious problem that required taking immediate remedial action.

Design Flow:	Not reported	Baseline Flow:	Not reported

Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

Agency Type: Private

Waste Type: Not reported

Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported

Design Flow:	Not reported	Baseline Flow:	Not reported

Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

Agency Type: Private

Waste Type: Not reported

Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported

POTW: Not reported

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

Agency Type: Private

Waste Type: Stormwater Runoff - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Agency Phone: Not reported
Design Flow: Not reported
Baseline Flow: Not reported
Facility Type: Not reported
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Not reported
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: Not reported

Design Flow: Not reported
Baseline Flow: Not reported
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: Not reported
POTW: Not reported

Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Stormwater Runoff - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Design Flow: Not reported
Baseline Flow: Not reported
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Stormwater Runoff - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.

EPA Waste Codes Addendum

Code	Description
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D004	ARSENIC
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
F006	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/29/04
Date Made Active at EDR: 02/27/04
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 02/06/04
Elapsed ASTM days: 21
Date of Last EDR Contact: 02/06/04

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/17/03
Date Made Active at EDR: 02/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 12/22/03
Elapsed ASTM days: 42
Date of Last EDR Contact: 12/22/03

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 11/17/03

RCRIS: Resource Conservation and Recovery Information System
Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/12/04
Date Made Active at EDR: 02/10/04
Database Release Frequency: Varies
Date of Data Arrival at EDR: 01/19/04
Elapsed ASTM days: 22
Date of Last EDR Contact: 01/19/04

ERNS: Emergency Response Notification System
Source: National Response Center, United States Coast Guard
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/03
Date Made Active at EDR: 03/12/04
Database Release Frequency: Annually
Date of Data Arrival at EDR: 01/26/04
Elapsed ASTM days: 46
Date of Last EDR Contact: 01/26/04

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/01/01
Database Release Frequency: Biennially
Date of Last EDR Contact: 03/16/04
Date of Next Scheduled EDR Contact: 06/14/04

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 01/09/04
Database Release Frequency: Annually
Date of Last EDR Contact: 01/06/04
Date of Next Scheduled EDR Contact: 04/05/04

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 02/09/04

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: N/A
Database Release Frequency: N/A

Date of Last EDR Contact: N/A

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched select national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments. The categories reviewed included, but were not limited to: *gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc.*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full historical investigation as defined in ASTM E1527. The information provided in this proprietary database may or may not be complete; i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(A note on "dry cleaning" sites: it is not possible for EDR to differentiate between establishments that use PERC on-site as a cleaning solvent and sites that function simply as drop-off and pick-up locations or that are traditional wet cleaning/laundry facilities. Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

BROWNFIELDS DATABASES

VCP: Voluntary Cleanup Program Properties
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Next Scheduled EDR Contact: 05/31/04

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Next Scheduled EDR Contact: N/A

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

125 NORTH ORANGE AVENUE
125 NORTH ORANGE AVENUE
CITY OF INDUSTRY, CA 91744

TARGET PROPERTY COORDINATES

Latitude (North):	34.038399 - 34° 2' 18.2"
Longitude (West):	117.978996 - 117° 58' 44.4"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	409628.5
UTM Y (Meters):	3766651.2
Elevation:	303 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

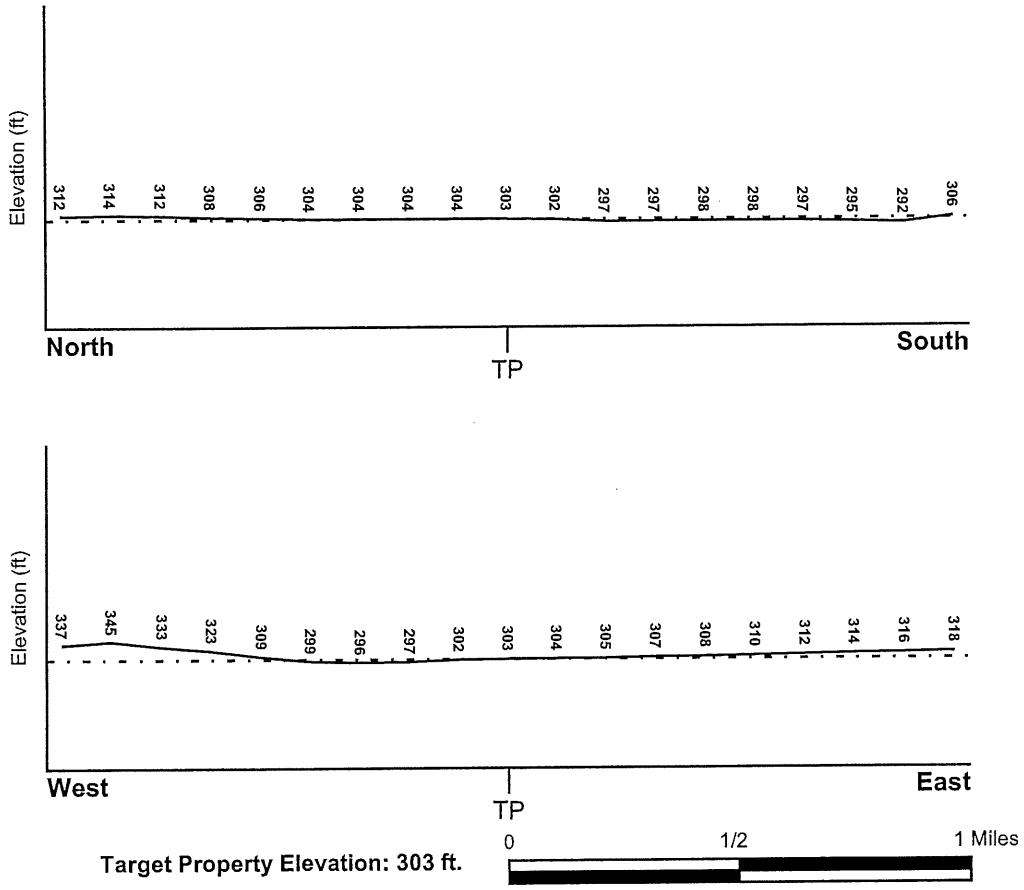
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	34117-A8 BALDWIN PARK, CA
General Topographic Gradient:	General SW
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0650350000A

Additional Panels in search area: 0650430870B
0650430865B
0650390000A

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles ESE
Site Name:	Brough Industries Inc.
Site EPA ID Number:	CAD983633710
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	not available.
Hydraulic Connection:	Aquifers under the site are most likely hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam clay silt loam clay loam sandy loam gravelly - sandy loam loamy sand fine sand coarse sand sand gravelly - sand
Surficial Soil Types:	loam clay silt loam clay loam sandy loam gravelly - sandy loam loamy sand fine sand coarse sand sand gravelly - sand
Shallow Soil Types:	fine sandy loam gravelly - loam sand silty clay
Deeper Soil Types:	stratified clay loam silty clay loam gravelly - sandy loam coarse sand sand weathered bedrock very fine sandy loam

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

System Name:	SAN GABRIEL VALLEY WATER CO.-EL MONTE		
Organization That Operates System:	P O BOX 6010 EL MONTE, CA 91734		
Pop Served:	151064	Connections:	43161
Area Served:	EL MONTE/SAN GABRIEL BASIN		

Sample Information: * Only Findings Above Detection Level Are Listed

Sample Collected:	02/19/1985	Findings:	.900 UG/L
Chemical:	CARBON TETRACHLORIDE		
Sample Collected:	02/19/1985	Findings:	.800 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	02/19/1985	Findings:	2.100 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	02/19/1985	Findings:	12.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	02/20/1985	Findings:	.800 UG/L
Chemical:	CARBON TETRACHLORIDE		
Sample Collected:	02/20/1985	Findings:	.800 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	02/20/1985	Findings:	2.000 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	02/20/1985	Findings:	10.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/15/1985	Findings:	5.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/22/1985	Findings:	1.000 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	03/22/1985	Findings:	8.200 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/29/1985	Findings:	6.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/12/1985	Findings:	.950 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	04/12/1985	Findings:	9.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	06/24/1985	Findings:	5.800 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	08/18/1986	Findings:	4.100 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/15/1986	Findings:	.860 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	09/15/1986	Findings:	5.800 UG/L
Chemical:	TRICHLOROETHYLENE		

Sample Collected:	10/20/1986	Findings:	6.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	11/24/1986	Findings:	6.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/22/1986	Findings:	1.000 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	12/22/1986	Findings:	6.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	01/27/1987	Findings:	.640 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	01/27/1987	Findings:	.620 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	01/27/1987	Findings:	6.960 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	02/24/1987	Findings:	.660 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	02/24/1987	Findings:	7.410 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/10/1987	Findings:	.860 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	03/10/1987	Findings:	.740 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	03/10/1987	Findings:	7.780 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/08/1987	Findings:	.590 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	04/08/1987	Findings:	.570 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	04/08/1987	Findings:	4.490 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	05/13/1987	Findings:	5.060 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	06/09/1987	Findings:	.770 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	06/09/1987	Findings:	.650 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	06/09/1987	Findings:	.850 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	06/09/1987	Findings:	5.450 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	07/16/1987	Findings:	.700 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	07/16/1987	Findings:	6.400 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	08/07/1987	Findings:	.600 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	08/07/1987	Findings:	4.900 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/02/1987	Findings:	1.000 UG/L
Chemical:	1,2-DICHLOROETHANE		

Sample Collected:	09/02/1987	Findings:	5.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	10/02/1987	Findings:	.600 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	10/02/1987	Findings:	4.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	11/03/1987	Findings:	.700 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	11/03/1987	Findings:	1.000 UG/L
Chemical:	1,2-DICHLOROETHANE		
Sample Collected:	11/03/1987	Findings:	8.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	11/03/1987	Findings:	.700 UG/L
Chemical:	TOTAL TRIHALOMETHANES		
Sample Collected:	02/12/1988	Findings:	3.400 UG/L
Chemical:	DICHLOROMETHANE		
Sample Collected:	02/12/1988	Findings:	2.400 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/05/1988	Findings:	3.400 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	06/06/1988	Findings:	1.600 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/02/1988	Findings:	3.800 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/02/1988	Findings:	.600 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	12/02/1988	Findings:	1.700 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	12/02/1988	Findings:	3.300 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	01/04/1989	Findings:	.600 UG/L
Chemical:	CARBON TETRACHLORIDE		
Sample Collected:	01/04/1989	Findings:	.600 UG/L
Chemical:	1,1,1-TRICHLOROETHANE		
Sample Collected:	01/04/1989	Findings:	5.900 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	02/02/1989	Findings:	.700 UG/L
Chemical:	CARBON TETRACHLORIDE		
Sample Collected:	02/02/1989	Findings:	2.100 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	02/02/1989	Findings:	.800 UG/L
Chemical:	1,1,1-TRICHLOROETHANE		
Sample Collected:	02/02/1989	Findings:	6.200 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/16/1989	Findings:	1.200 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	03/16/1989	Findings:	2.500 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	03/16/1989	Findings:	3.100 UG/L
Chemical:	TRICHLOROETHYLENE		

Sample Collected:	06/30/1989	Findings:	1.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	08/21/1989	Findings:	2.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	08/21/1989	Findings:	13.300 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	08/21/1989	Findings:	4.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/12/1989	Findings:	1.100 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	09/12/1989	Findings:	2.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/12/1989	Findings:	1.100 UG/L
Chemical:	TOTAL TRIHALOMETHANES		
Sample Collected:	10/03/1989	Findings:	1.000 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	10/03/1989	Findings:	2.660 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/05/1989	Findings:	3.500 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	12/05/1989	Findings:	2.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	01/10/1990	Findings:	4.000 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	01/10/1990	Findings:	2.000 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	01/10/1990	Findings:	2.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	02/02/1990	Findings:	2.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/05/1990	Findings:	3.400 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	03/05/1990	Findings:	2.800 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/03/1990	Findings:	2.000 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	04/03/1990	Findings:	2.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	05/04/1990	Findings:	2.200 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	06/04/1990	Findings:	.700 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	06/04/1990	Findings:	1.800 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	07/12/1990	Findings:	2.300 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	08/02/1990	Findings:	2.300 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/04/1990	Findings:	1.700 UG/L
Chemical:	1,1-DICHLOROETHYLENE		

Sample Collected:	09/04/1990	Findings:	2.900 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/04/1990	Findings:	19.300 MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	10/04/1990	Findings:	2.900 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	11/01/1990	Findings:	3.200 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/05/1990	Findings:	3.100 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	12/05/1990	Findings:	2.100 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/21/1991	Findings:	3.300 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	03/21/1991	Findings:	4.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	06/13/1991	Findings:	3.200 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	06/13/1991	Findings:	2.000 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	06/13/1991	Findings:	3.400 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	07/03/1991	Findings:	3.500 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	09/04/1991	Findings:	3.300 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	09/04/1991	Findings:	3.900 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/04/1991	Findings:	4.100 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	12/04/1991	Findings:	1.500 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	12/04/1991	Findings:	4.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/12/1992	Findings:	5.500 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	03/12/1992	Findings:	1.100 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	03/12/1992	Findings:	3.600 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/02/1992	Findings:	5.700 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	05/19/1992	Findings:	21.700 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	06/16/1992	Findings:	7.900 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	06/16/1992	Findings:	4.300 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	06/16/1992	Findings:	3.800 UG/L
Chemical:	TRICHLOROETHYLENE		

Sample Collected:	07/24/1992	Findings:	7.200 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	08/12/1992	Findings:	4.000 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	09/02/1992	Findings:	2.700 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	09/02/1992	Findings:	.800 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	09/02/1992	Findings:	4.300 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	09/02/1992	Findings:	2.400 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	09/02/1992	Findings:	3.200 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	10/20/1992	Findings:	5.300 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	03/24/1993	Findings:	1.400 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	03/24/1993	Findings:	1.500 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	03/24/1993	Findings:	1.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	05/28/1993	Findings:	1.100 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	05/28/1993	Findings:	1.300 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/16/1993	Findings:	5237.000 UG/L
Chemical:	NITRATE NITROGEN (NO3-N)		
Sample Collected:	09/16/1993	Findings:	.300 MG/L
Chemical:	FLUORIDE (TEMPERATURE DEPENDENT)		
Sample Collected:	09/16/1993	Findings:	14.000 UG/L
Chemical:	CHROMIUM (TOTAL)		
Sample Collected:	09/16/1993	Findings:	92.000 UG/L
Chemical:	ALUMINUM		
Sample Collected:	09/16/1993	Findings:	2.200 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	09/16/1993	Findings:	1.500 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	09/16/1993	Findings:	1.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	09/16/1993	Findings:	23.200 MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	09/16/1993	Findings:	5237.000 UG/L
Chemical:	NITRATE + NITRITE (AS N)		
Sample Collected:	12/20/1993	Findings:	.800 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	12/20/1993	Findings:	2.700 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	12/20/1993	Findings:	19.700 MG/L
Chemical:	NITRATE (AS NO3)		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

Sample Collected:	02/22/1994	Findings:	21.100 C
Chemical:	SOURCE TEMPERATURE C		
Sample Collected:	02/22/1994	Findings:	10.000 UNITS
Chemical:	COLOR		
Sample Collected:	02/22/1994	Findings:	530.000 UMHO
Chemical:	SPECIFIC CONDUCTANCE		
Sample Collected:	02/22/1994	Findings:	7.800
Chemical:	PH (LABORATORY)		
Sample Collected:	02/22/1994	Findings:	176.800 MG/L
Chemical:	TOTAL ALKALINITY (AS CACO3)		
Sample Collected:	02/22/1994	Findings:	215.700 MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	02/22/1994	Findings:	208.000 MG/L
Chemical:	TOTAL HARDNESS (AS CACO3)		
Sample Collected:	02/22/1994	Findings:	58.000 MG/L
Chemical:	CALCIUM		
Sample Collected:	02/22/1994	Findings:	15.400 MG/L
Chemical:	MAGNESIUM		
Sample Collected:	02/22/1994	Findings:	27.300 MG/L
Chemical:	SODIUM		
Sample Collected:	02/22/1994	Findings:	1.300 MG/L

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
