Re: **EXECUTIVE SUMMARY** - Phase I Environmental Assessment
Located at 15000 East Nelson Avenue
City of Industry, California 91746
Centec Project #123175

Dear Mr. Mendelson:

Centec Engineering has completed the Phase I Environmental Assessment for the above-referenced property. Bound copies of the report are included for your use.

Generally we conclude there are no compelling reasons to indicate that the subject property, consisting of an irregular-shaped parcel totaling approximately 6.15 acres currently developed as a truck and trailer dispatch and repair center, located at15000 East Nelson Avenue, City of Industry, California 91746, is, or has been adversely impaired by significant hazardous material contamination. However, records indicated installation of a 3,500-gallon underground storage tank (UST) on or adjacent to the subject property in 1960. An extensive review of available maps and records could not substantively affirm or deny the existence or possible location of this UST, although the preponderance of available information suggests the UST was actually on the adjacent property to the east. A physical investigation may be appropriate to determine whether this tank is extant. Removal of the UST if it is on-site will be appropriate. These conclusions are evident after a review of the property itself, a review of current and historical records available at this time, and a review of possible impacts on the property from off-site conditions. This conclusion has been reached for the following reasons:

1) The subject property is currently occupied by Pacific Motor Trucking (PMT), a business that repairs trucks and car-carrier trailers. They also formerly used the property to dispatch drivers, but that now takes place at another location. There are three major buildings on-site, as well as two storage containers and one storage shed. The northern building is used for the administration and former dispatch and current employee break area. The central building is used for truck and trailer repairs, and includes the hazardous materials and waste storage area for the property. The southern building has a two-story office section which is apparently vacant, and two bays. One is a truck-high dock that does not appear

to be in active use, and the other is ground-level and has areas for tire and some other large part storage. There are some areas of surficial spills in the hazardous waste storage space, but it does not appear that the spills present a risk of significant impairment. They are contained within a bermed space, are absorbed, and the absorbent is appropriately disposed of.

2) According to historical aerial photographs, USGS Maps, and County of Los Angeles Building Department and County of Los Angeles Department of Public Works records reviewed, the subject property area included the adjacent property to the east and included the addresses 15002, 15006 and 15010. It was either under cattle feed lot use or a dairy from prior to 1936 through 1960, when permits indicated development of the entire property as a lumber yard. The eastern portion (15006-15010) was apparently sold in approximately 1988. The western portion (the subject property) was then developed for Great Dane Trucking for use as a truck and trailer repair station. Great Dane vacated the subject property in 1993, and the current occupant moved onto the subject property then. Since the subject property had been part of a larger parcel, there is some confusion as to the exact location of an underground storage tank which was permitted for installation in 1960. Four USTs were removed from the eastern property in 1988, one of which was 3,500 gallons in size.

3) There was no evidence of PCB-containing transformers on the property. Although the pre-1980 construction of the buildings may suggest the usage asbestos as a component of building materials, no damaged friable or non-friable materials suspected of containing asbestos were noted during the on-site inspection. Asbestos does not appear to be a significant issue of concern relative to a perceived asset value, and no samples were collected for analysis. Prior to any planned demolition or an extensive remodel of the buildings, a thorough asbestos inspection should be undertaken. No stored lead-based paints were noted during inspection of any of the buildings, although the age of the buildings may suggest the possible use of lead-based paint. However, no sampling or laboratory analyses were completed during this investigation to verify the presence or absence of lead in any building materials. There were no records of incidents located involving hazardous materials at the subject property.

4) A review of adjacent properties indicated some evidence for concern as the general vicinity is industrially-zoned and developed with various manufacturing and distribution facilities. The neighboring property to the east (which at one time was part of the subject property) is the current location of fuel dispensers, and the former location of soil contamination which was remediated and "closed" in 1993.

5) Our review of known cases of contamination found within a one-mile radius of the subject property found no reasons to suspect specific point sources of off-site sources of contamination are likely to adversely impact the subject property. However, the property is situated within the northwestern perimeter of a seven-mile long "Superfund" area, but responsible parties to the groundwater contamination have generally been identified and are located to the east, or upgradient, of the subject property. Although the groundwater below or near the subject property may be impacted by chlorinated solvents associated with this plume, the subject property has not apparently been considered a responsible or potentially responsible party by the California State Regional Water Quality Control Board or the USEPA. None of the leaking UST sites appear close enough or significant enough to present a realistic threat of impairment to the subject property. Most impacted soil only and have been remediated and "closed," including leakage that was discovered on the adjacent property to the east.

Centec therefore concludes there appears to be a low risk of environmental impairment with this property, and no immediate actions are recommended. Because of the possible ambiguity over the exact location of the 3,500-gallon UST, efforts to locate the UST on the subject property may be warranted to more confidently confirm the absence or presence of the UST. Our report goes into further detail regarding how and why these conclusions are reached. Northern Trust Bank of California N. A. and/or assigns may rely on the information contained in the report as being accurate and thorough subject to the limitations detailed in the report. If you should have any questions whatsoever regarding the report, please feel free to contact me directly.

Sincerely,

INTRODUCTION

Centec Engineering is pleased to submit the following information in response to written authorization from Northern Trust Bank of California N. A. to provide a Phase I Environmental Assessment for property located at 15000 East Nelson Avenue, City of Industry, California 91746. The scope of services authorized includes a preliminary environmental assessment of the property in order to identify any potential areas of environmental concern or contamination.

The results of this study are based on information obtained from the following sources:

- Visual inspection of the property and adjacent areas
- Vista Information Solutions, Inc. "Site Assessment Report" for the subject property, dated December 18, 2003
- Versar, Inc., "Environmental Exit Inspection, Great Dane Trailers, Inc., 15000 E. Nelson Avenue, City of Industry, California," July, 29, 1998
- A portion of Western Environmental Services, Inc., "Report, Groundwater Discovery Well, Installation and Sampling, 15006 Nelson Avenue, City of Industry, California,"1989
- Western Environmental Services, Inc., "Environmental Site Assessment and Preliminary Remedial Action, Edna Incorporated, Industry California," July 20, 1988
- City of Industry, Administrative Offices
- County of Los Angeles Building and Safety Department
- County of Los Angeles Fire Department
- County of Los Angeles Department of Health Services
- County of Los Angeles Assessor's Office
- San Gabriel Basin Water Quality Authority
- University of California at Los Angeles, Department of Geography Air Photo Archives
- California State University Northridge, Geography Map Library Sanborn Fire Insurance Map Collection
- South Coast Air Quality Management District
- California Environmental Protection Agency - Department of Toxic Substances Control
- California Water Quality Control Board - Los Angeles Region
- California Waste Management Board
- California Department of Conservation - Division of Oil & Gas
- California Division of Mines & Geology
- California Governor's Office of Planning & Research
- United States Environmental Protection Agency

A list of specific agencies and individuals contacted is included in Table 1 in the Appendix.

SITE DESCRIPTION AND HISTORY

The subject property consists of an irregular-shaped parcel totaling approximately 6.15 acres currently developed as a truck and trailer dispatch and repair center. The property is located on the south side of Nelson Avenue, about 500 feet east of California Avenue, bounded on the west by the concrete-channelized Puente Creek and on the south by a railroad right-of-way and Valley Boulevard, as shown on the Site Location map (Map A) on the following page. It can be found in the Los Angeles County Assessor's Map Book 8208, Page 11, Parcel 28, as shown on the Assessor's Map (Map B) on the following pages.

A history of the subject property was ascertained from records reviewed at the County of Los Angeles Building Department, the County of Los Angeles Department of Public Works (DPW), historical aerial photographs, and historical USGS Maps. (A request for Sanborn Fire Insurance Maps with the California State University Northridge Geography Map Library indicated no Sanborn coverage was available for the site vicinity.) According to the available historical aerial photographs reviewed and the documents on file at the Building Department, the subject property area included the adjacent property to the east and included the addresses 15002, 15006 and 15010. It was either under cattle feed lot use or a dairy from prior to 1936 through 1960, when permits indicated development of the entire property as a lumber yard. After construction of a mill shed and sawdust bins, no permit activity was noted until 1980 when permits for electrical work indicated that Dooley Forest Products was continuing to occupy the property. The property appears to have been divided into its current configuration (separate from 15006 East Nelson) in 1981 based on permits issued to Edna Inc. for drainage and grading and the demolition of some buildings. Permits from 1988 indicated demolition of buildings and plumbing and electrical work on the current subject property. These permits were issued to both Edna Inc. and Great Dane. (Permits for 15006 East Nelson from 1989 and 1990 were issued to American Brass and Iron, and later permits were issued to UPS.) Great Dane appears to have used the subject property for trailer parts, service and repair until approximately 1998 when the current occupant, Pacific Motor Trucking, moved in. There were no indications of illicit dumping or other unauthorized uses of the subject property in the available records reviewed. No unusual conditions were visible in the general vicinity of the property in any of the historical aerial photographs reviewed, a complete list of which can be found in the Appendix.

The Versar report from 1998 is an Exit Inspection for Great Dane. One section of the report says "A 3,500-gallon underground gasoline storage tank (UST) was installed in approximately 1960 by the former occupant, Dooley Lumber. The UST's location is approximately 30 feet east of the existing service building. According to Great Dane's interviewed personnel, this UST was never used by Great Dane Trailers, Inc. In its 1996 report, Clayton recommended a subsurface investigation to evaluate potential impact from this UST at the subject property. This tank is believed to still be located at the subject property. There is no evidence that any subsurface investigation has been performed as recommended by Clayton, and therefore, subsurface conditions

near this UST remain unknown." Centec's review of maps and records for the subject property and the neighboring property to the east (which at one time was part of the entire Dooley property) did not suggest that the UST from 1960 was installed on the current subject property. It appears to have been installed on the property to the east, based primarily on the plot plan accompanying the installation permit, the configuration of on-site buildings in an aerial photograph from 1963 (there does not appear to be another configuration of an office with a nearby garage 20 feet to the southeast elsewhere on the property, other than at the northwest corner of the now-adjacent property to the east), the lack of a known UST or dispenser island on the subject property, the fact that the permit was issued to 15010 Nelson Avenue, and the fact that four USTs were removed from the adjacent eastern property in 1988, one of which was of 3,500 gallons in size. For reference, copies of pertinent items regarding the USTs are included in Exhibit 1 of the Appendix. Although it is Centec's opinion that the 3,500-gallon UST was actually installed on and removed from the adjacent property to the east, there is still some ambiguity (the installation plot plan indicates the UST was "200 yards" south of Nelson Avenue, whereas 200 feet would have matched the approximate location of the USTs removed in 1988) and further efforts to locate an existing UST may be prudent.

The property is zoned M-1, a City of Industry designation for industrial purposes. Property users adjacent to the subject property include multi- and single-family housing across Nelson Avenue to the north, Scully National Leasing and ABI Foundry to the east, used car sales, Bob's Burgers and a mobile home park across the railroad right-a-way and Valley Boulevard to the south, an import business, MacDowell Forms, a public scale, and various light -industrial businesses across La Puente Creek to the west, and a Head Start children's center, vacant land and Puente Creek across Nelson Avenue to the northwest. Scully National Leasing has registered underground storage tanks (USTs) and is a listed location of contamination. Some of the other businesses in the area may use hazardous materials. Please refer to the "Known Sources of Off-Site Contamination" section of this report for information regarding properties of known environmental concern within a one-mile radius of the subject property.

GEOLOGY AND HYDROGEOLOGY

The subject property is situated approximately 300 feet above mean sea level, adjacent to Puente Creek and about 2,000 feet north of the San Jose Creek. San Jose Creek, now a cement-lined channel, runs through the canyon formed between the San Jose Hills to the north and the Puente Hills to the south.

The general stratigraphy of the area consists of the upper Miocene Age Puente Formation at shallow depths, which is overlain by alluvial deposits of Recent Age. The Puente Formation consists of well bedded siltstone, shale, and sandstone, while the overlying alluvial deposits consist of poorly consolidated sand, clay, and gravel. Exploratory borings in the vicinity have shown the depth of subsurface contact between the Puente Formation and the overlying alluvium varies from approximately 15-30 feet, and is very irregular (Bortugno, 1986).

Groundwater beneath the site is perched on the bedrock of the essentially non-water bearing Puente Formation. Surface irregularities of the Puente Formation control the depth and thickness of the overlying perched groundwater. It appears the depth to this bedrock increases from east to southwest, and that the local groundwater gradient is generally to the west and southwest, following the surface flow of the San Jose Creek. Depth to this perched groundwater can vary, dependent primarily on seasonal rainfall, but can generally be expected at 70-80 feet below ground surface (bgs) where it was measured in the early 1990's in a groundwater monitoring well installed on the adjacent property to the east.

ON-SITE INSPECTION

The subject property and the surrounding vicinity were inspected by Centec personnel on January 8, 2004. Photographs of the property are included in the Appendix for reference.

The subject property consists of an irregular-shaped parcel totaling approximately 6.15 acres currently developed as a truck and trailer dispatch and repair center. There are four buildings on-site. The northern-most building is a wood-frame and stucco construction which at one time was a house, and has been converted to offices and dispatch areas for drivers. It is set on a concrete foundation. Floors are covered with carpet and 12" square vinyl tiles. Ceilings are covered variously with 12" square acoustic tiles, lowered T-bar grids with 2' by 4' acoustic tiles and insets for fluorescent lights, and painted drywall or lath and plaster. The roof appears to be covered with asphalt shingles. The main service building at the center of the property is wood-framed and sided, with no ceilings, just open to the deck. The floors are bare concrete and the roof appears to be asphalt-shingled. The sales building at the southeastern corner of the property is also wood-framed and sided with an asphalt-shingled roof. The northern portion of this building has been designed as a two-story office building and the ceilings have lowered T-bar grids with 2' by 4' acoustic tiles and insets for fluorescent lights, floors appeared to be carpeted, and walls appear to be drywall. The southern section of the building is actually open-sided with the eastern half a truck-high concrete dock, and the western half an asphalt-paved space. There is a stack at the southeastern corner of the building where a spray-booth had formerly been. The offices on the north side of the building appear to be completely vacant, the truck-high dock appears to have gathered items which may not be immediately useful, but are not to be disposed of yet. The west side of the shelter has fenced and locked areas for tire storage.

Because of the age of the buildings (pre-1980), it is possible that building materials contain asbestos, however no damaged friable or non-friable materials suspected of containing asbestos were noted during the on-site inspection. Asbestos does not appear to be a significant issue of concern relative to a perceived asset value, and no samples were collected for analysis. Prior to any planned demolition or an extensive remodel of the building, a thorough asbestos inspection should be undertaken. No stored lead-based paints were noted during inspection of any of the buildings, although the age of the buildings may suggest the possible use of lead-based paint. However, no sampling or laboratory analyses were completed during this investigation to verify the presence or absence of lead in any building materials.

The subject property is currently occupied by Pacific Motor Trucking (PMT) a business that repairs trucks and car-carrier trailers. They also formerly used the property to dispatch drivers, but that now takes place at another location. The administration and former dispatch and current employee break areas are in the building at the northeast corner of the property. This is a former house, but was converted to offices in approximately 1960 when the subject property was in use as a lumber yard. (This

building was actually divided in half when the property was subdivided into two distinct parcels in 1981.) No hazardous materials are in use in the office. Just south of the office building are two cargo containers and a small wood-frame building for secure storage of supplies. The building at the center of the property is used for the service bays for the trucks and trailers. There are no in-ground hoists in any of the bays, and it appears that housekeeping in the individual bays has a high priority. There were very few areas of spills or stains. Hazardous materials are stored at both the east and west sides of the service building. Aerosol cans of spray lubricants and paints are kept within a fenced and locked section of the building where other parts are also stored. The west side of the building had been a truck wash area at one time, and there are concrete berms around it which kept the wash water inside and flowing to the clarifier on-site. The space is currently used for storage of new and used oil and anti-freeze, as well as grease, and parts washers. Some spillage has occurred, evident in the absorbent near some of the 55-gallon drums, but it is a relatively small amount of spillage, and none appears to have flowed out of the building. (The clarifier no longer functions. It was filled with cement in 1998, so none of the hazardous materials spills flow through the drains.) The waste oil is removed from the property by Applied Waste Management, the drained oil filters are removed by Asbury, and the waste anti-freeze is removed by Toxguard, which recycles it. The wastes are removed at least every 90 days, although it usually removed more frequently. Some of the hazardous material containers are set on pallets (sometimes used as a secondary container), but the entire space can be perceived as secondary containment due to the concrete berms enclosing the area.

The former clarifier is located off of the south side of the service building. It is clearly filled with concrete. There are metal cages for welding gasses tanks, clearly labeled for full and empty tanks located along the south side of the service building. A caged compressor is housed along the west side of the service building. There is a drain near this compressor area that leads directly to Puente Creek. PMT has taken the precaution of surrounding the drain with a large absorbent "sock" to prevent oil from flowing into the creek. There is another drain near the southwestern side of the property which also has this protection.

The southeastern building was described above. The space that formerly held the spray booth did not evince areas of staining. There is a 55-gallon drum on the elevated concrete dock area which appears to be full of something, and should be appropriately disposed of.

Most of the rest of the property is asphalt-paved and used for parking the car-carrier trailers, some with the trucks attached. The asphalt did not appear to be in excellent condition, but there were no obvious areas of significant staining or soil showing through. There is an area along the southeastern corner of the property that has a rail siding, and is currently grass-covered. An access-way to the sewer is situated in this grass area. It does not appear that there have been spills of hazardous materials in this area. The plants appear healthy and growing. The planned landscaping is situated on the north side of the property, along East Nelson Avenue. This landscaping

includes specimen trees, ivies, some shrubs, and grasses and weeds that do not appear to be well-maintained, but do not appear to have harm from toxic dumping or hazardous materials abandonment. The trash bin did not evince abandoned questionable wastes.

Pad- and pole-mounted Southern California Edison (SCE) transformers serve the property. No stains or signs of leakage were noted on the ground around or below the poles. SCE maintains that it is "highly unlikely that the transformers contain polychlorinated biphenyl (PCB) at concentration levels requiring special management under the Environmental Protection Agency's (EPA) rules. Federal law has prohibited the manufacture of transformers utilizing PCB since 1977. In addition, SCE has never specified the purchase of distribution transformers utilizing PCB as the insulation/cooling fluid exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, we determined that the concentration of PCB in the mineral oil is less than 50 parts per million (ppm) in over 96 percent of the units. The mineral oil in the 4 percent that tested above 50 ppm is generally below 100 ppm." The EPA defines less than 50 ppm as "non-PCB."

There was no documentary or physical evidence of any current or former wells, sumps, ditches, groundwater monitoring wells, or pits on the property that could be utilized as conduits for contamination. No posted historical landmark properties or buildings were noted in the vicinity of the subject property. No electricity transmission lines were noted in the vicinity of the subject property. There was evidence of sensitive environmental receptors such as wetlands, marshes, endangered species, etc., in the vicinity, in that the subject property is immediately adjacent to the Puente Creek, listed species could exist in the open areas near the subject property, and there are residences and a school almost immediately adjacent to the subject property to the north.

Radon is generally not considered a significant area of concern for Southern California and has not been tested for in the course of this investigation. A 1990 study by the State of California Department of Health Services, in conjunction with the EPA, concluded that California ranks as the third lowest state in the country for percentage of dwellings exceeding the recommended action level for radon. The study also concluded that Southern California generally has an even lower incidence and likelihood of elevated levels of radon than the rest of the state.

REVIEW OF GOVERNMENT AGENCIES AND PUBLIC RECORDS

Records on the property were reviewed at the **County of Los Angeles Building and Safety Department**. Records for the addresses 15000, 15002, 15006 East Nelson Avenue were reviewed. No record folder for 15010 East Nelson Avenue was located. The records covered 1937 through 2000. Most of the construction activity identified in the file was discussed in the "Site Description and History" section of this report.

A request to review all pertinent information on the property was made to the **County of Los Angeles Fire Department Fire Prevention Section** through the **County of Los Angeles Department of Health Services** (DHS). The DHS responded that there were no records located for the subject property address.

Records were reviewed at the **County of Los Angeles Department of Public Works Underground Tank Unit** (DPW) for the address 15006 East Nelson Avenue because it and the subject property had once been one parcel. The information available documented removal of four USTs from 15006 East Nelson Avenue, however there were also documents relating to the entire property prior to its division. The records covered 1987 through 1994.

Records of permits and violations were requested from the **South Coast Air Quality Management District** (AQMD). The AQMD forwarded a blank Equipment List for The Truck Wash from 1991 and an Equipment List showing an inactive permit for a paint spray booth issued to LA Great Dane in 1989. The notes from the inspector who visited in 2002 said that "The company [LA Great Dane] is out of business. Current occupant is Pacific Motor Trucking. . . . The company repairs auto carriers. The business is essentially a machine shop. No current AQMD issues." No Notices of Violation or Notices to Comply were located for the subject property address.

A request was made to view all pertinent files on the property with the **State of California Environmental Protection Agency - Department of Toxic Substances Control** (DTSC). No records were located for the subject property address.

A review of oil and gas well maps with the **State of California Department of Conservation, Division of Oil and Gas**, revealed no wells on or near the subject property. Map C in the Appendix shows the site and vicinity.

The subject property is not found on public records as a known source of contamination by tank leaks or other unauthorized forms of hazardous material releases. Please refer to the following section of this report for our in-depth review of known cases of contamination located within one mile of the subject property.

KNOWN SOURCES OF OFF-SITE CONTAMINATION

Centec requested and received a database report on known or potential sources of off-site contamination in the vicinity of the property from Vista Information Solutions, Inc. (Vista) in San Diego, California. The Vista database searched federal, state, and local lists of public information, according to appropriate ASTM standards, to identify and geographically locate sites of concern within a maximum radius of one mile of the subject property.

The Vista report identified nine different sites within a ¼-mile radius of the subject property as a source of contamination from leakage of underground storage tanks (USTs), process spillage, CERCLIS site, or a landfill. Numerous other sites are identified as users of USTs or generators of hazardous waste, but not as sources of contaminations. The closest site is adjacent to the east side of the subject property, Edna, Inc.(shown as #2 on the Vista lists and maps). Contamination was discovered during an apparent tank replacement program (there are currently fuel dispensers on the subject property). Contamination of the soil was detected, remediated, and the case was "closed" in 1993. Because only soil was reported as impacted by the leak, it is considered unlikely that the subject property would be significantly impacted by this case. Six of the other leaking UST sites reported within the ¼-mile radius of the subject property affected "soil only" and the other two affected groundwater, but all have been remediated and "closed" by the regulatory agencies and are generally considered too distant to present a likely impact to the subject property. A "landfill" listing (#7B) is a routine identification as an active waste tire collection point, and the CERCLIS site (#5A) was investigated in 1992-1993, possibly in association with its leaking UST that was remediated and "closed" by 1993.

There is a National Priorities List "Superfund" area in the vicinity identified as the San Gabriel Groundwater Basin 4. It is a solvent-contaminated plume of valley floor groundwater that stretches along the axis of San Jose Creek through much of the City of Industry. The groundwater is contaminated with trichloroethylene (TCA), perchloroethylene (PCE), and carbon tetrachloride (CTC) from years of industrial abuses. The plume is fairly well documented from Nogales Street on the east to Puente Avenue on the west, a distance of approximately seven miles, and is generally less than ½ mile wide. The subject property is situated on the northwestern extreme of the west-flowing plume. Responsible and potentially responsible parties have been generally identified and include several large manufacturing and chemical facilities (i.e. Dupont and Teledyne Casting) east (upgradient) of the subject property. It does not appear that any of the current or previous occupants of the subject property have been identified as a PRP or contributor to the contamination, nor does the history of the property suggest a likelihood of any implication with the contamination. Remedial efforts are scheduled to begin in a few years under a cooperative arrangement with the EPA, the State of California and local water regulatory agencies.

A summary of the Vista findings and a map showing the identified site locations within the critical ¼-mile radius of the subject property are included on the following pages. The entire Vista report, including site location maps, is included in Exhibit 2 in the Appendix.

CONCLUDING REMARKS

Generally, we conclude there are no compelling reasons to indicate that the subject property, consisting of an irregular-shaped parcel totaling approximately 6.15 acres currently developed as a truck and trailer dispatch and repair center, located at15000 East Nelson Avenue, City of Industry, California 91746, is, or has been adversely impaired by significant hazardous material contamination. However, records indicated installation of a 3,500-gallon underground storage tank (UST) on or adjacent to the subject property in 1960. An extensive review of available maps and records could not substantively affirm or deny the existence or possible location of this UST, although the preponderance of available information suggests the UST was installed on and removed from the adjacent property to the east. A physical investigation may be warranted to more confidently confirm the absence or presence of the UST. No other actions appear necessary at this time. Removal of the UST if it is on-site will be appropriate. These conclusions are evident after a review of the property itself, a review of current and historical records available at this time, and a review of possible impacts on the property from off-site conditions.

This Phase I Environmental Assessment was performed in accordance with generally and currently accepted environmental engineering principles and practices, including current ASTM standards. The findings of this Phase I report concerning the site should be considered a professional opinion based upon the data obtained during the investigation and should not be considered a definite statement that hazardous contamination is or is not present at the site. Any findings or recommendations concerning asbestos-containing materials should be considered limited in scope and are intended for preliminary screening purposes only. The conclusions made in this report are based on and in accordance with information obtained at this time from visual inspections of the property and from relevant federal, state, regional, and local agencies. Although Centec Engineering believes that the information contained herein is reliable, no guarantee is made as to the accuracy of information provided to Centec by others. This report was prepared for the use of **Northern Trust Bank of California N. A. and/or assigns**. Although Centec Engineering consents to the release of this report to other third parties at the discretion of **Northern Trust Bank of California N. A.**, Centec makes no warranty of any kind to other third parties and cannot be held liable for any reliance by other third parties upon the information contained herein.

HISTORICAL AERIAL PHOTOGRAPH REVIEW

On January 16, 2004, Centec personnel reviewed historical aerial photographs at the University of California at Los Angeles -Spence Historical Aerial Photograph Collection in Los Angeles, California. Using a magnifying glass, over 300 photographs were searched for the subject property and any signs of prior use or contamination. The subject property appears on the following photographs:

DATE	DESCRIPTION	PHOTOGRAPH #
08/20/69	North of Pomona Fwy at 7th	E-58-186
08/20/69	North of Pomona Fwy on Turnbull	E-58-185
03/11/68	City of Industry, north of Pomona Fwy	E-58-184a
04/11/66	Sunset and Temple looking southwest	E-58-151
02/26/64	Valley and Hacienda looking west	E-58-119
04/16/63	City of Industry, N of UPRR on Turnbull	E-58-115
04/16/63	Industry north on 7th	E-58-114
01/07/63	E on Valley at Puente and Industry	E-58-90
01/04/59	La Puente looking west	E-58-50
01/04/59	La Puente looking north	E-58-49

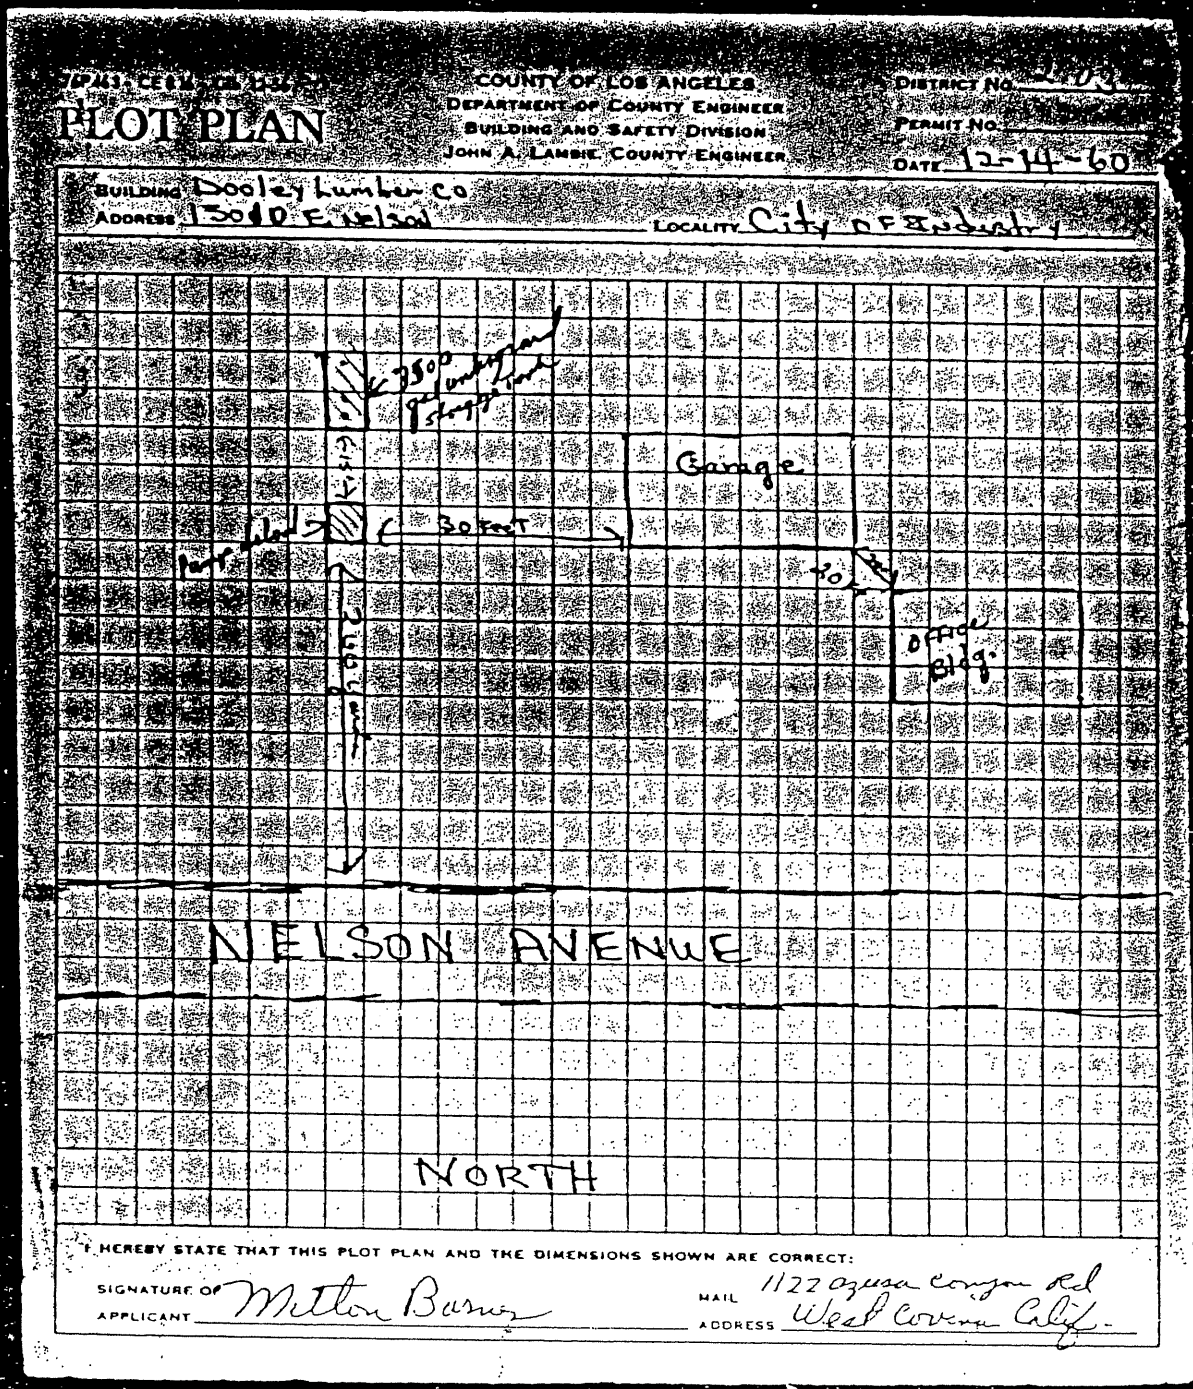
1960 permit to install the UST on a 10½-acre parcel at 15010 E. Nelson Ave. finaled 3/24/61.



Hand-drawn Plot Plan accompanying UST installation permit, with Nelson Ave. on bottom (north). Indicates 3,500-gal. UST and pump island to be installed 30 feet east of garage (which is 20 feet southwest of office bldg.), but "200 yards" south of Nelson Ave.

15006 NELSON AVENUE
CITY OF INDUSTRY, CALIFORNIA
CHRONOLOGY OF ENVIRONMENTAL WORK

November 1987: Western Environmental Services (WES) drilled Angle Boring B1A beneath the waste oil tank south of the garage/warehouse. Chemical Research Laboratories Inc. (CRL) analyzed a soil sample from 5 feet below the tank for total petroleum hydrocarbons (TPH) by United States Environmental Protection Agency (USEPA) Method 8015 and for volatile organic compounds by USEPA Method 8240. The sample was found to have a TPH level of 5 milligrams per kilogram (mg/kg). No volatile compounds were present at detectable concentrations.

April 1988: Rudy's Service Station Equipment Maintenance, Inc. removed four underground storage tanks and an associated dispenser island. Three diesel tanks (capacities 3500 gallons, 4000 gallons, and 5000 gallons) and one 2000-gallon waste oil tank were removed. WES collected nine samples from the tank excavations and submitted them to CRL for TPH analysis by USEPA Method 418.1. TPH concentrations of up to 5400 mg/kg were detected in the soil samples from the diesel tanks area; TPH levels were below the detection limit in samples from the waste oil tank excavation.

May 1988: WES drilled two shallow hand-augered borings south of the shed. Soil samples were collected from a depth of 5 feet below ground surface (bgs) from each of these boreholes (Borings B2 and B3) and submitted to CRL for analysis for TPH by USEPA Method 8015 and for volatile organic compounds by USEPA Method 8240. No petroleum hydrocarbons or volatile compounds were present in the sample from Boring B2. The sample from Boring B-1 was found to have a TPH level of 1 mg/kg; no volatile compounds were present at detectable concentrations.

May/June 1988: WES drilled and sampled three borings to determine the extent and concentration of hydrocarbon contamination in soil near the former diesel tanks area. Boring B-2 was drilled to 45 feet bgs, and Borings B-3 and B-4 were drilled to 40 feet bgs. CRL used USEPA Method 418.1 to analyze soil samples collected at five-foot intervals from Borings B-2 and B-3 and at 10-foot intervals from Boring B-4. TPH levels were found to range from 2 mg/kg (Boring B-4, 10- and 20-foot samples) to 60 mg/kg (Boring B-2, 40-foot sample).

June 1988: Approximately 75 cubic yards of contaminated soil were excavated, spread on site, and aerated.

September 1988: WES collected samples from the treatment bed and submitted them to SCS Analytical Laboratory for analysis by USEPA Method 418.1. The results (TPH levels 3600 mg/kg to 8900 mg/kg) showed that aeration had had little effect on the diesel-contaminated soil.

October 1988: The contaminated soil was hauled to Petroleum Waste Inc. for disposal.

February 1989: WES installed, developed, and sampled Monitoring Well MW-1, at the direction of the California Regional Water Quality Control Board, Los Angeles Region (CRWQCB-LA). Soil samples were collected at 5-foot intervals to 65 feet bgs, the depth at which groundwater was encountered; the boring was drilled to a total depth of 85 feet bgs. CEL analyzed the samples by USEPA Methods 418.1 (TPH) and 8020 (volatile aromatics). No TPH or benzene was detected in any of the samples. The following volatile aromatics were present at detectable concentrations: toluene (maximum 0.040 mg/kg, 40- and 45-foot samples), ethylbenzene (maximum 0.010 mg/kg, all but 5-, 15-, 20-, and 40-foot samples), and xylenes (maximum 0.220 mg/kg, 25-foot sample).

Dear Mr. Novak:

UST LOCAL OVERSIGHT PROGRAM (LOP) CASE CLOSURE
LOCATION: 15006 NELSON AVENUE, INDUSTRY

We are recommending the site noted above for closure and we would like for you to concur with our recommendation. Enclosed is a completed copy of the Leaking Underground Fuel Storage Tank Program Case Closure Summary, the LOP Site Summary and a Site Map for this site. Also enclosed is a letter from your office indicating that no further action is required at this site with respect to the Well Investigation Program. As stated in the Closure Guidelines from the State Water Resources Control Board, this form is being sent to you for the 30-day comment period. Unless we hear from you within 30 days of the date of this letter, we will issue a closure letter for the site.

If you have any questions or need additional information about the work at this site, please contact Nilcole Long at (818) 458-3572.

Very truly yours,

HARRY W. STONE

Comments (Depth of Remediation, etc.): This site was overseen by Phil Chandler at the L.A. RWQCB (W.I.P.). One groundwater well was installed under his direction. Contaminated soil was excavated and disposed. Based on correspondence on file it appears that the site was investigated and remediated to the Board's satisfaction (see attached letter).

IV. Closure

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan?	Yes	No
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan?	Yes	No
Does corrective action protect public health for current land use?	**Yes**	No
Site management requirements:		
Should corrective action be reviewed if land use changes? Yes	**No**	
Monitoring wells Decommisioned: Yes No	Number Decommisioned:	Number Retained:
List enforcement actions taken:		
List enforcement actions rescinded:

PROPERTY AND THE ADJACENT AREA (within 1/8 mile) CONT.

Site Description:	, EPA ISSUED A ROD IN MARCH1993. THE PUENTE VALLEY OPERABLE UNIT (PVOU) IS LOCATEDWITHIN THE SOUTHEASTERN PORTION OF THE SAN GABRIEL VALLEY, APPROXIMATELY 25 MILES FROM THE PACIFIC COAST, IN EASTERN LOS ANGELES COUNTY. LOCATED WITHIN THE SAN GABRIELVALLEY IS THE SAN GABRIEL BASIN. THE MAJORITY OF THE GROUNDWATER PUMPED FROM THE MAIN SAN GABRIEL BASIN IS USED FOR DRINKING WATER, SUPPLIED TO THE PUBLIC BY PURVEYORS THAT ARE REGULATED AS PUBLIC WATER SUPPLY SYSTEMS. LAND USE AT THE SITE INCLUDESINDUSTRIAL, COMMERCIAL, ANDRESIDENTIAL. THE SAN GABRIEL VALLEY HAS BEEN THE SUBJECT OF ENVIRONMENTAL INVESTIGATION SINCE 1979 WHEN GROUNDWATER CONTAMINATED WITH VOLATILE ORGANIC COMPOUNDS (VOCS)WAS FIRST IDENTIFIED. IN MAY 1984, FOUR BROAD AREAS OFCONTAMINATION WITHIN THE BASIN WERE LISTED AS SAN GABRIEL AREAS 1 THROUGH 4 ON THEENVIRONMENTAL PROTECTION AGENCY'S (EPA'S) NATIONAL PRIORITIES LIST (NPL). EPA SUBSEQUENTLY DIVIDED THE BASIN INTO EIGHT OPERABLE UNITS (OUS) TO PROVIDE A MEANS OF DESCRIBING HYDROGEOLOGY AND CONTAMINANT DISTRIBUTION, AND PLANNING REMEDIAL ACTIVITIES IN THE BASIN. IN MAY 1993, EPA SENT SPECIAL NOTICE LETTERS TO 58 POTENTIALLY RESPONSIBLE PARTIES (PRPS), REQUESTING THAT THESE PARTIES PRESENT A GOOD FAITH OFFER TOPERFORM THE REMEDIAL INVESTIGATION/FEASIBILITY STUDY (RI/FS) FOR THE PVOU. FORTY-TWO OF THESE PRPS FORMED THEPUENTE VALLEY STEERING COMMITTEE (PVSC), AND IN SEPTEMBER 1993 ENTERED INTO AN ADMINISTRATIVE ORDER ON CONSENT(AOC) WITH EPA TO CONDUCTTHE RI/FS. ALSO INSEPTEMBER 1993, EPA ISSUED A UNILATERAL ADMINISTRATIVE ORDER (UAO) TO TWO PRPS, GOE ENGINEERING AND DIVERSEY CORPORATION, THAT FAILED TO PRESENT AGOOD FAITH OFFER. DIVERSEYCORPORATION COMPLETED THE ACTIVITIES THAT THE UAO REQUIRED IN 1996, AND THE PVSC AND EPA COMPLETED THE RI/FS IN MAY 1997. PRPS IN THE ELMONTE AND SOUTH EL MONTE OUSHAVE ENTERED INTO AOCS TO PERFORM THE RI/FS FOR THEIR RESPECTIVE OUS. EPA ALSO ISSUED UAOS TO TWO PARTIES IN THE EL MONTE FOR INFORMATION ABOUT ADDITIONAL DETAILSNOT LISTED, PLEASE CALL CUSTOMER FULLFILLMENT AT 1-800-767-0403

SITE ASSESSMENT REPORT

DESCRIPTION OF DATABASES SEARCHED

A) DATABASES SEARCHED TO 1 MILE

NPL
SRC#: 19

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for National Priorities List was December, 2001.

The NPL Report is the US EPA's registry of the nation's worst uncontrolled or abandoned hazardous waste sites. NPL sites are targeted for possible long-term remedial action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980.

SPL
SRC#: 113

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for CalSites Database was October, 2000.

This database is provided by the Cal. Environmental Protection Agency, Dept. of Toxic Substances Control. The agency may be contacted at: 916-323-3400.

CORRACTS
SRC#: 14

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for RCRIS Corrective Action Sites was August, 2001.

The CORRACTS database contains information concerning RCRA facilities that have conducted, or are currently conducting a corrective action. A Corrective Action Order is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may also be imposed as a requirement of receiving and maintaining a TSDF permit.

RCRIS-TSDC
SRC#: 556

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for RCRIS TSDs Subject to Corrective Action was August, 2001.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDCs are treatment, storage and/or disposal facilities that are subject to corrective action under RCRA.

B) DATABASES SEARCHED TO 1/2 MILE

CERCLIS
SRC#: 17

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Comprehensive Environmental Response, Compensation and Liability Information Sys was December, 2001.

The CERCLIS database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation by the U.S. EPA for the release, or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation, and ultimately placed on the National Priorities List (NPL).

NFRAP
SRC#: 18

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for No Further Remedial Action Planned was December, 2001.

The No Further Remedial Action Planned Report (NFRAP), also known as the CERCLIS Archive, contains information pertaining to sites which have been removed from the U.S. EPA's CERCLIS database. NFRAP sites may be sites where, following an initial investigation, either no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

SCL
SRC#: 112

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for CalSites Database was October, 2000.

This database is provided by the Department of Toxic Substances Control. Two-thirds of these sites have been classified, based on available information, as needing "No Further Action" (NFA) by the Department of Toxic Substances Control. The remaining sites are in various stages of review and remediation to determine if a problem exists at the site. Several hundred sites have been remediated and are considered certified. Some of these sites may be in long term operation and maintenance.

RCRIS-TSD
SRC#: 12

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for RCRIS Treatment, Storage and Disposal Facilities was August, 2001.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.

SWLF
SRC#: 23

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for USGS Solid Waste Landfills was December, 1991.

This database is provided by the United States Geological Survey. The agency may be contacted at: 703-648-5613.

SWLF-CO
SRC#: 51

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Los Angeles County Soild Waste Landfills Transfer Stations was February, 1998.**

This database is provided by the Los Angeles County Department of Health Services, Solid Waste Management Program. The agency may be contacted at: 323-881-4151.

SWLF-CO
SRC#: 70

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for City of Los Angeles Landfills Transfer Stations was April, 1999.**

This database is provided by the City of Los Angeles, Environmental Affais Department. The agency may be contacted at: 213-580-1070.

SWLF
SRC#: 163

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Solid Waste Inventory System was February, 2002.**

This database is provided by the Integrated Waste Management Board. The agency may be contacted at: 916-255-4021.

LUST-REG
SRC#: 108

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Region 6 Leaking Underground Storage Tanks was July, 2001.**

This database is provided by the Lahontan Region Six South Lake Tahoe. The agency may be contacted at: 530-542-5400.

LUST-REG
SRC#: 121

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Region 4 Leaking Underground Storage Tank was April, 2001.**

This database is provided by the Regional Water Quality Control Board, Region #4. The agency may be contacted at: 323-266-7582.

LUST-REG
SRC#: 126

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Region 6 Leaking Underground Storage Tanks was July, 2001.**

This database is provided by the Regional Water Quality Control Board, Region #6. The agency may be contacted at: 760-241-7365.

LUST
SRC#: 164

VISTA conducts a database search to identify all sites within 1/2 mile of your property. **The agency release date for Leaking Underground Storage Tank Information System was October, 2001.**

This database is provided by the California Environmental Protection Agency. The agency may be contacted at: 916-341-5740.

C) DATABASES SEARCHED TO 1/4 MILE

UST
SRC#: 45

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Underground Storage Tanks was January, 1994.

This historical database is provided by the State Water Resources Control Board, Office of Underground Storage Tanks. Please refer to the local level UST list for more current information. Be advised that some states do not require registration of heating oil tanks, especially those used for residential purposes.

AST
SRC#: 60

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Aboveground Storage Tanks was January, 2001.

This database is provided by the State Water Resources Control Board. The agency may
be contacted at: 916-227-4364.

D) DATABASES SEARCHED TO 1/8 MILE

ERNS
SRC#: 8

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for Emergency Response Notification System was December, 2000.

ERNS is a national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS reporting system contains preliminary information on specific releases, including the spill location, the substance released, and the responsible party.

RCRA-LQG
SRC#: 16

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for RCRIS Large Quantity Generators was August, 2001.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Large Generators are facilities which generate at least 1000 kg./month of non-acutely hazardous waste (or 1 kg./month of acutely hazardous waste).

RCRIS-SQG
SRC#: 15

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for RCRIS Small Quantity Generators was August, 2001.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Small Quantity Generators are facilities which generate less than 1000 kg./month of non-acutely hazardous waste.

RCRIS-NOTI
SRC#: 1298

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for RCRIS Notifiers was August, 2001.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal.The RCRIS Notifiers contains information on formerly regulated RCRA sites with more

SPILLS
SRC#: 107

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for Region 4 SLIC Site List was September, 2001.

This database is provided by the Regional Water Quality Control Board, Region #4.
The agency may be contacted at: 323-266-7576.

End of Report
